PREFACE

EVERY student of Canadian history will feel a keen interest in the publication of a work the object of which is to describe the Canadian pictorial material assembled in one place which may be drawn upon for illustrative purposes. One chief difficulty in appreciating much of our earlier story is the difference in the appearance of the country then and now. We are so accustomed to Canada as we see it now, and as we move in it, that we are hardly conscious of the fact that what are to us to-day thriving cities and familiar scenes, formed, only a few years ago, part of a vast wilderness untrodden by the foot of the white man. It is here that illustrations associated with the beginnings and the advance of our civilization prove such valuable aids, since they permit one to obtain a connected and systematized view of our development.

Twenty years is not a long space of time in which to make a pictorial collection, and that of the Public Archives is necessarily incomplete. It is, however, sufficiently extensive and representative to be of practical use to the literary workers of this country.

The mere enumeration of the titles of the items in the collection would serve a useful purpose, but one may hope that these clear, scientific, and scholarly volumes will remain authoritative and respected. This is the first attempt that has been made to publish a scientific catalogue of Canadian prints, and, although it is confined to the items in the Public Archives of Canada, it will serve as a guide to future collectors. When I decided some years ago to publish a catalogue, I did not fully realize the amount of work it would involve. Watching its progress I was tempted to adopt some simpler form. But in its present form there can be no regret. It is a work of permanent value to a steadily increasing body of men and women who are determined to make known the history of this country and who will welcome the knowledge which its pages reveal.

To Mr. Kenney my thanks are due for the zeal with which he has carried out the difficult task entrusted to him, and more especially for the excellent scholarship so plainly manifest in his work.

A. G. DOUGHTY.

PRÉFACE

CEUX qui étudient l'histoire canadienne ne manqueront pas de vivement s'intéresser au présent ouvrage, car il a pour but de décrire la collection de tableaux et de portraits d'une institution où tout chercheur d'illustrations peut les utiliser.

La différence d'aspect qui existe entre le Canada d'autrefois et le Canada d'aujourd'hui constitue l'un des principaux obstacles à la pleine intelligence de la période de début de notre histoire. Nous sommes tellement familiers avec le Canada que nous voyons et que nous parcourons, que nous nous rendons à peine compte du fait que les lieux où se trouvent aujourd'hui des villes prospères et des endroits connus formaient—il y a quelques années à peine—partie d'une immense et sauvage solitude que n'avait pas encore foulée le pied des blancs. On comprend mieux alors l'utilité des illustrations qui reconstituent les commencements et les diverses phases de notre civilisation: ces documents rendent possible une connaissance synthétique et ininterrompue de notre essor.

Vingt années! Voilà un laps de temps peu considérable pour réunir une collection de tableaux et portraits. Aussi bien celle des archives publiques est nécessairement incomplète. Elle est cependant suffisamment variée et représentative pour offrir des renseignements pratiques aux littérateurs du pays.

La simple énumération des titres des différents objets de cette collection rendrait déjà d'utiles services; il est toutefois permis d'espérer que cet ouvrage clair, méthodique et savant fasse autorité et qu'il suscite l'estime des connaisseurs. Il marque la première tentative de publier un catalogue scientifique de gravures canadiennes. Quoiqu'il ne fasse mention que des objets déposés dans l'édifice des archives publiques du Canada, il pourra servir de modèle aux futurs collectionneurs. Il y a quelques années, quand je pris la résolution de publier un catalogue, je ne me rendis pas compte de la somme de travail que comportait un tel ouvrage; et lorsque je constatai les dimensions que prenait ce catalogue je faillis adopter une disposition plus simple. Toutefois le plan définitif de ce travail ne devrait susciter aucun regret. Ce livre constituera une source inépuisable de renseignements pour un nombre grandissant d'hommes et de femmes résolus à vulgariser l'histoire de leur pays et heureux d'accueillir avec bienveillance ce livre si plein de connaissances.

M. Kenney mérite mes remerciements pour le zèle dont il a fait preuve en menant à bien la difficile entreprise que je lui avais confiée. Il convient surtout de le féliciter de la profonde érudition que son travail révèle.

INTRODUCTION

THE Public Archives of Canada, in the terms of the Act under which they are administered, "consist of all such public records, documents and other historical material of every kind, nature and description as, under the provisions of this Act, or under the authority of any order in council made by virtue thereof, are placed under the care, custody and control of the Dominion Archivist."¹ Provision is further made that the Dominion Archivist, who now bears the title of Keeper of the Records, "may acquire for the Public Archives all such original records, documents and other material as he deems necessary or desirable to secure therefor, or he may acquire copies thereof, and all such originals or copies so acquired shall form part of the Public Archives."

The Public Archives (*i.e.*, the department of the Federal government service so designated) is, therefore, not only a depository for the older governmental records, but also a national department of history, where are preserved sources of every kind having value for the study of the history of Canada.

Not least important among such historical sources available in the Public Archives is the collection of pictures. There are some 1500 framed pictures on view in the department, and about 6,000 unframed separate pictures; if to these are added prints mounted in scrap-books, and book-illustrations possessing historical value, the whole collection will amount to more than 25,000 items. This does not include the very extensive collection of photographs, prints and posters relating to the Great War, which form part of the war museum. In character the pictures range from oil paintings, some of very great artistic as well as historical importance, through water-colour and wash drawings to pen-and-ink and pencil sketches, and from rare and beautiful engravings and etchings to modern photographs and photo-process prints of many varieties. In date they go back to Ramusio's view and plan of Hochelaga, first published in 1556 but here appearing in the edition of 1565. There are, of course, many earlier prints and drawings which are to be found in the collection in facsimile or other reproductions of later date. A considerable number of prints and a few paintings belong to the era of French rule, but the great bulk of the pictures are of the period since the surrender of Canada in 1760.

The Public Archives office was created in 1872, but it was not until after the appointment of the present Keeper of the Records in 1904,

¹2 Geo. V, chap. 4.

and, indeed, not until after the occupation, in 1906, of what is now the older wing of the Archives building, that the collection of historical pictures was begun. At that time the pictorial records in the Archives consisted only of the illustrations in the books in the library and of a very small number of drawings and photographs mounted in portfolios in the same division. In 1906 the Minister in charge of the Archives Branch, as it then was, became convinced, partly as a result of the acquisition by private persons of a large number of very valuable Canadian historical pictures, that it was the duty of the government to obtain and preserve such documents. Consequently authorization was then for the first time given to the Dominion Archivist to expend money for the purchase of paintings, drawings and prints. As a result, the collection now in the department has been gathered between that date and the present. The great majority of the pictures have been obtained by purchase; a small number are copies made by agents of the department from originals preserved elsewhere; and a few—but among them some of the most valuable—are gifts made to the people of Canada through the Public Archives. Of the number of such generous benefactors of the nation are the Duke of Westminster, the Marchioness of Aberdeen and Temair, Earl Bathurst, the Earl of Durham, the late Earl of Minto and Lady Minto, the late Earl Grey, Viscount Rothermere, the late Viscountess Wolseley, Lord Lovat, Lord Beaverbrook, Sir Leicester Harmsworth, the late Sir James Stuart, the estate of the late Sir Richard Scott, the Hon. Charles Murphy, Mrs. Marslin, and many other persons whose names will be mentioned in the catalogue in association with the donated pictures.

In subjects treated the collection has been built up on broad lines. The aim of the department has been to meet the legitimate needs of all *bona fide* investigators of Canadian history.

In portraits the collection is particularly rich. Among original oil or water-colour portraits may be mentioned Van Loo's "Louis XV," Brompton's replica of his "Sir Charles Saunders," J. Green's "Hugh Debbieg," Théophile Hamel's "Sir James Stuart," D. J. Hurley's "Thomas D'Arcy McGee," A. D. Patterson's replica of his "Sir John A. Macdonald," Moss's "Dr. Kingsford," Wyly Grier's "Chief Justice Armour," Trityllis's "Lady Aberdeen," and an unsigned portrait of Douglas Brymner, first Dominion Archivist. There are several interesting French engraved portraits of the seventeenth and eighteenth centuries, and many English of the seventeenth, eighteenth and nineteenth centuries. Modern Canadian portraits are very numerous, though it must be admitted that

relatively few of these have high artistic merit. Of representations of historical events there are Copley's "Landing of Wolfe at Quebec," Benjamin West's "Death of Simon Fraser," Mrs. Hopkins' "Red River Expedition, 1870," Rutherford's "Surrender of Pound Maker," a collection of water colours representing the movement of Swiss colonists to the Red River in 1821, perhaps by Peter Rindisbacher, Sydney Hall's sketches made in the years 1878-81, modern interpretations of early history by Canadian artists such as Jefferys and Reid, besides many less notable drawings and prints. In the related field of cartoons are the famous "HB." series, many of Bengough's Canadian sketches, and others of interest. Noteworthy also is the large group of pictures relating to the aborigines—Indians and Eskimos—their personal appearance, customs and manner of living. Perhaps the most important division of the collection, however, is that of views of places. Here are the very valuable sets or groups of views, in the original drawings or the printed reproductions, or both, by Hervey Smith, Short, Peachey, Hunter, Fisher, Webber, Parkyns, Heriot, Gray, Cockburn, Back, Coke Smyth, Bainbrigge, Murray, Sproule, Duncan, Warre, Lady Falkland, Mrs. Hall, Petley, Bartlett, Krieghoff, Köllner, Mrs. Bayfield, Paul Kane, Sir Edmund and Lady Head, Wakefield, Willis, Martindale, Baker, Holdstock, Sandys, L. M. Davis, Agnes Gardner King, to name only a few of the artists of our Canadian pictorial records. There are several individual landscapes of merit by contemporary Canadian, British and other painters. And, in such a summary sketch as this, hundreds of pictures must necessarily be passed over that are equally worthy of notice.

By the time Canada came well into the current of recorded history, the principles of the arts of drawing and painting were established. Mural painting "a fresco," painting in oils on panel or canvas, the variety of tempera painting known as "gouache," and miniature painting on ivory or parchment, to all of which occasional reference will be made in the following pages, had been very fully worked out on the technical side. The most notable development since has been that of pen-and-wash drawing and water-colour painting in the eighteenth and early nineteenth centuries. This form of art has an especial interest for the student of Canadian historical records. The ease with which the materials could be carried and used made water-colour painting the favorite method of the artist or would-be artist who found himself on the outskirts of civilisation. To it we owe the wealth of pictorial representations of Canadian scenery in the second half of the eighteenth and first half of the nineteenth century that has been

left to us by travellers, military officers, civil officials and an occasional settler in this then remote frontier of empire. In general, those in the collection have more value as topographical records than as works of art, but some, as, notably, several of the paintings of George Heriot, of J. Cockburn and of Henry J. Warre, are very pleasing. In water-colour portraiture, however, there is a remarkable example of finished work in Green's portrait of Hugh Debbieg.

In the days before the development of photography, training in accurate topographical sketching was a necessary part of the education of military and naval officers, of civil engineers, and of almost all persons engaged in works of applied science. These men were able to produce drawings that, as topographical and architectural records, rivalled, and sometimes, in wealth and exactness of detail, surpassed photographs. Of such a character are the works of Richard Short, of Hervey Smith, of James Peachey, of J. Hunter, of G. J. Parkyns, of A. J. Russell, some of those of George Heriot, and many other pen-and-ink, pencil, and water-colour drawings.

The development of photography has, of course, wrought a revolution during the last seventy-five years in the methods of taking field records of scenery. It has also wrought a revolution in the production of printed copies of pictures.

The reader who is interested in the methods and history of picture-printing should consult some of the many special treatises on the subject. But it seems well to give here, as an aid to the use of the following catalogue, a sketch of these methods, a sketch which will be quite summary and without any pretense to conclusive authority.

Picture-prints, or "prints," as they are commonly designated, fall, according to form of publication, into two chief classes, those that are published separately and those that appear as illustrations to books or periodicals. Although there is frequently but little distinction in character between these two classes, it is obvious that, in general, the separate print must possess a certain intrinsic distinction, usually artistic, while the important qualities of the book-illustration are clearness, cheapness, and the capability of being reproduced in large numbers without serious deterioration. From the historian's point of view the illustration is as important as the separate print.

Another distinction by which prints may be divided into two categories is whether they are primary works of art, the original production of the man who prepares the plate, whose whole object has been the printed picture, or, as generally, are copies made by the engraver

from the painting or drawing of another artist. On older prints the names of both artist and engraver usually appear; sometimes there are three names, those of the painter of the picture, of the draughtsman who copied it in a line drawing more suitable for reproduction, and of the engraver who made the plate. In many cases the artist has prepared the picture with the immediate purpose of having it reproduced and has worked in such close co-operation with the engraver that the resulting print really belongs to the first of the above-mentioned categories.

In the early days of picture-printing the term "proofs" was applied to impressions of the plate taken by the engraver to test the character of his work. It now usually designates the first prints taken from a plate, which are frequently made on special paper and sold at an advanced price.

The earliest form of picture-printing having practical importance was that by means of wood-engravings, or "*woodcuts*." In Europe this began early in the fifteenth century, and, in its first phase, was brought to its highest standard by the great German artist, Albrecht Dürer (1471-1528). During the sixteenth century the art flourished, and was used extensively for book-illustration; during the seventeenth and eighteenth it declined, although continuing in use for the poorer kinds of illustration. In wood-engraving the design to be reproduced is cut on the face of the wood-block "in relief," that is to say, the parts of the surface that are to carry the ink are left untouched, while those that are to print white are cut away. A method of printing pictures in several shades, designated as "in *chiaroscuro*," was developed by Ugo da Carpi (1455?-1523?), Lucas Cranach (1472-1553) and others, by using several wood-blocks and several shades of ink for each print, each block having all of its surface cut away except the portions which would register one of the shades of the picture. In later times this device was adapted to the production of colour-prints.

In contrast to wood-cutting, all engraving on metal plates is of the type called *intaglio*, in which the design to be reproduced is incised into the surface. After having been inked, the plate is wiped; the plain surface then prints white, while the ink that has remained in the markings is transferred to the paper. In order to obtain satisfactory results heavy pressure must be used in the application of the plate to the paper; it follows that the use of a metal plate is usually indicated by the indentation which its edges leave on the paper margins of the print. In some qualities of paper, however, this quickly disappears.

Copper has been, except for a few decades in the nineteenth century,

the usual material of plates engraved in intaglio. Copper plates for prints were used in the fifteenth century, not long after the date of the earliest woodcuts. The work was of the type known as *line-engraving*, in which the characteristic element is the line scratched by a pointed instrument, the burin, on the surface of the metal. As a matter of fact, line-engravers have almost always, except in the very beginning of the art, made use of acid to a greater or less degree to produce the cutting of the metal, but the plate is known as a line-engraving so long as the dominating characteristic of its appearance is that of the line scratched with the burin. From the beginning of the sixteenth to the middle of the nineteenth century line-engraving was probably the most important form of print production, though the excellence of the work varied from age to age. The "outline engraving" which was popular in France for a short time about the year 1800 is only a variety of line-engraving.

Etching, that form of engraving in which the incision on the plate is produced entirely, or chiefly, by the application of acid, has the following fundamental process: the plate is covered with a thin layer of "ground," consisting of a mixture of waxes, gums, resins, and sometimes tallow; the design is drawn through the ground with a needle, or by other means; and the acid is then applied, corroding the exposed portions of the metal. The method of engraving known as *dry-point* is usually classed with etching: it consists in scratching the design directly on the metal surface with a needle resembling the etching needle, but much harder and stronger. It is obvious that the process is essentially that of line-engraving, but the appearance of the print is quite distinct from that resulting from the work of the burin.

The production of prints from etchings began at the end of the fifteenth or the beginning of the sixteenth century, and the art reached its acme in the hands of Rembrandt in the seventeenth. Thereafter there was a decline until the nineteenth century, when a revival took place. In contrast to line-engraving, etching is still practised somewhat extensively, but almost solely because of its artistic appeal.

The demand of the publishers for illustrations for the books which they were turning out in such large numbers in the sixteenth century gave its first great impetus to the development of engraving. Books that have a peculiar interest to the American historian are the geographical works of the time, such as the publications of Ortelius, Mercator, Hondius and the De Brys, for which engraving was used extensively on both maps and illustrations. There was also a contemporary growth in the public demand for separate printed pictures,

a demand which produced the profession of print-seller. The early print-sellers were frequently also engravers and printers. Such were Hieronymus Cock of Antwerp, the Galle family of Antwerp, the Sadeler family of Brussels and Antwerp, the Wierix brothers of Antwerp, and the Van de Passe family of Utrecht, which had establishments from time to time in Germany, France, England and Denmark. To the same class belonged, in Paris, the prolific engraver Balthasar Moncornet.

The popular demand for pictures, and the desire of the painters to reach a wider audience, resulted, in the seventeenth century, in a remarkable development of reproductive engraving, the use of engraving to multiply copies of paintings. Raphael had gathered a group of engravers around him to reproduce his work, but it was Rubens and Van Dyck to whom this development was chiefly due. Henceforth, so long as engraving remained commercially profitable, the bulk of the best work was of this kind. Portraits were especially popular subjects. Rembrandt and Van Dyck had shown the wonderful possibilities of etching as a method of portraiture, but the most important work in the reproduction of portrait paintings, prior to the development of tone processes, was done by the French line-engravers of the seventeenth century, of whom the most famous was Nanteuil.

Reproductive engraving called for some means by which the tone of paintings could be reproduced more directly than by manipulation of the line. The first important method—after that of the chiaroscuro wood-blocks—was *mezzotint*, invented by Ludwig von Siegen, a native of Utrecht, about 1642, and introduced into England by Prince Rupert. The shades in mezzotint are printed from a metal surface that has been roughened. The earliest plates were prepared by the actual roughening of the parts that were to print dark, but the method was very soon reversed, and the regular mezzotint process consists in first producing a roughness or “burr” over the whole plate and then working out the design by burnishing, to a greater or less degree, those parts that are to print light. Mezzotint was found very suitable for portrait work. It flourished for about two centuries, chiefly in England, and, like etching, is still practised for its artistic value.

The next important tone-process was known as the “*chalk*” or “*crayon*,” *manner*, invented in France about the middle of the eighteenth century as an imitation of crayon drawing. It is really a form of etching, in which the printing surface is produced by dots instead of lines, and sometimes can be distinguished only with difficulty

from "soft-ground etching," another development of the eighteenth century. *Stipple* engraving, invented in the second half of the century, is very similar in method and results, but is designed to imitate the painted surface rather than the crayon strokes. In this catalogue prints in either the crayon manner or stipple will generally be found classified as "stipple" engravings. Stipple, like mezzotint, was practised chiefly in England, where the height of its popularity was in the period from about 1772 to about 1810, and its most famous exponent was the Italian engraver, Francesco Bartolozzi.

Aquatint, the next noteworthy tone-process, made its appearance, as a regular method of picture production, in France within the decade 1760-1770, although—as is also the case with stipple—a few stray examples exist from a much earlier date. In aquatinting the plate is covered with a porous ground of sand or powdered resin, attached temporarily to the surface by heating, and then etched. The successive shades, as in all etching, are produced by "stopping out" with varnish—between each immersion in the acid—those portions of the plate that have been sufficiently bitten. Aquatint was especially well suited for the reproduction of water-colour pictures, and it has peculiar interest to the Canadian student because of the many early landscapes of our country that have been so reproduced. Aquatinting continued in commercial use to about 1830, when it was largely superseded by lithography.

Frequently, in practice, the different methods were combined, and the one plate may contain work in two or more of the different processes—line, stipple, mezzotint, aquatint.

Colour-prints, that is, prints in which inks of different colours have been used, were occasionally published at earlier dates, but came into prominence only in the eighteenth century. From about 1770 to about 1815 they were exceedingly popular. They were usually printed from mezzotint, stipple or aquatint plates: sometimes one plate was used, being inked or painted by hand after each impression; sometimes a separate plate for each colour, used in the manner of the chiaroscuro wood-blocks. Occasionally one colour was superimposed on another in an attempt to get a wide variety of tones from a few cardinal colours.

Colour-prints must not be confused with "coloured" prints. It has been a common practice to colour by hand prints of all kinds, but especially aquatints and mezzotints. Some very beautiful contemporarily coloured examples exist of early Canadian aquatint views.

In the nineteenth century certain important developments in engraving accompanied a great expansion in the numbers of illustrated books and periodicals. One of these was the revival of wood-engraving, a revival which in its inception was largely due to the genius of the English engraver, Thomas Bewick (1753-1828). Wood-cutters developed, especially in America, extraordinary speed and dexterity, and woodcuts were used in vast numbers for illustrated newspapers and magazines. They were made still more serviceable by the invention, about 1860, of a method by which several blocks could be joined together in one picture. Hitherto the size of a wood-engraving had been limited by the size of a cross-cut of boxwood, which averaged about $10\frac{1}{2}$ inches in diameter. But soon after 1880 the commercial use of woodcuts was brought to an end by the development of "process" prints.

Another development of the early nineteenth century was the substitution of steel plates for copper, to some extent for etchings, stipples and mezzotints, but especially for line-engravings. Copper plates quickly deteriorated in use, while hundreds, and even thousands of impressions could be taken from steel plates before the design became too much worn. The use of mechanical aids, and the development of a technical skill among the engravers paralleling that of the wood-cutters, produced, in the period from 1820, when steel began to be substituted for copper, to about 1860, an immense output of steel engravings.

The first picture-printing process distinct from engraving was *lithography*, invented about 1796 by Alois Senefelder of Munich. In lithography the printing is done from the surface of a stone (or of some kinds of metal plates) that has an affinity for both the mutually repellent substances, grease and water. The design is either drawn directly on the stone with a greasy crayon or greasy ink, or transferred from paper on which it has been so drawn. In printing, the stone surface is damped and inked before each impression, the water adhering only to the clean parts, the ink only to those portions that have absorbed the grease of the design. A later development has been the application of an acid mixture, which increases the affinity of the untouched surface, and the resistance of the greased parts, to water, and, indeed, causes the design to stand up in slight relief. Lithography was used extensively, especially in France, in the second and third quarters of the nineteenth century. It was found very suitable for colour-printing, with a separate stone for each colour, and, more particularly between 1855 and 1875, many fine examples of colour-, or chromo-lithographs, were produced.

In the eighteenth and early nineteenth centuries Paris and London were the great centres of print publishing, and of these London was the more important for subjects of Canadian interest. Some of the notable publishers and dealers were Thomas Jefferys (d. 1771), whose interest in America at the time of the Seven Years War has given us many important maps and prints, Carrington Bowles, John Boydell (1719-1804), Rudolph Ackermann (1764-1843), C. J. Hullmandel (1789-1850), William Day and Louis Haghe, and Vincent Brooks, all of London; and, in the Paris of the first half of the nineteenth century, F. S. Delpech, R. J. Lemercier, and Adolphe Goupil. Towards the middle of the century many Canadian pictures were published in New York. A small amount of print production was beginning in Canada itself: this was chiefly in Montreal, although the earliest seem to have been issued in Halifax about 1816.

Since about 1885 the majority of picture prints, especially reproductions, have been produced by some form of *photographic process*, commonly called "process". These methods resemble those of the older engravers and lithographers, but the essential part of the work is done by means of photography. In general the basis is the fact that a mixture of bichromate of potash with gelatin, albumen or similar substances is rendered hard and insoluble by light. When such a composition is exposed to light through a photographic plate—positive or negative, direct or reversed, according to the particular method used—a surface is created which in hardness and softness corresponds exactly with the transparence and density of the photographic plate.

The various methods fall into three classes:

(1) Planographic Processes, in which the printing is done from a plane, or nearly plane, surface, as in lithography. In *colloTYPE* or *photoTYPE*, of which *heliotype* is only a variation, the gelatinous plate itself is used for printing, after the same manner as the lithographic stone: the soft parts take the water, the hard parts the ink. The term *photo-lithography* is given sometimes to the method in which the photographic negative is applied either to a sensitized metal plate or to a stone covered with an albuminous film, but also to that in which the design is printed on paper by photography and then transferred to the stone.

(2) Relief Processes, in which a surface in relief is produced to receive the ink, as in woodcut printing. In *line-printing* the albumen is used to cover zinc or copper; after the exposure, the soft albumen is washed away, while the hardened parts remain, reproducing the lines of the original picture. The plate is then etched

with acid, the parts covered by hard albumen being protected, and the result is a relief plate. The *half-tone* followed the line print, as mezzotint and stipple had followed line-engraving, and with the same object, that of reproducing the tones of pictures. For half-tone reproduction a picture is photographed through a "screen," which is really a glass covered with a net-work of fine lines. When the resulting negative and the albumen are properly used, an etched plate is obtained covered with minute dots corresponding in density to the tones of the original picture. Half-tone has been found fairly satisfactory for colour printing, especially by the "three-colour process," in which three plates are made for the three primary colours, and the tones obtained by superimposition, as in some of the colour-prints of the eighteenth century. The modern method is much more successful because the photographs for the three plates, taken with colour filters, give a more accurate analysis of the colours of pictures than was possible to the human eye.

(3) Intaglio Processes, in which the printing is done from ink retained in incisions on the plate, as in all the older engravings on metal. The chief of these processes is *photogravure*, in which the face of the copper first receives a covering of dust, as in aquatinting. The dust remains after the gelatin is washed, and in the etching produces a fine grain over the whole exposed surface. Photogravure is the best of all photographic processes for reproducing tones, but does not give colours.

In order to prolong the life of a plate several methods are in use. One is to put a thin facing of steel, by means of electrolysis, on the finished copper plate, a practice which is applied also to hand-engraved plates; another, to use the original plate only for making moulds, in which the printing plates are cast by electrolysis.

The classification of prints prepared by photographic process is somewhat difficult, partly because of the many names that have at different times been applied to the same method, and partly because of the many modifications, some of them trade secrets, which have been introduced, affecting the appearance of the finished print.

In the following catalogue prints are classified, so far as has been possible, as of the technical character that the appearance of each suggests.

Of the value of the pictorial record for historical purposes there is now a general high appreciation. We live in an age when the pictorial

presentation of fact or fiction has had an extraordinary revival and development. In the field of history this new interest shows itself in the use of exhibits, of lantern-slides, and even of moving pictures. The collection in the Public Archives is being drawn on more and more by scholars for material both for the illustrations in their books and for the lantern-slides that supplement their lectures. The teachers of Ottawa and its vicinity have brought their pupils by hundreds every year to see the display of paintings, drawings, prints and maps on the walls of the Public Archives, and their testimony as to the help thereby given to their teaching of Canadian history is significant. The little boy who did not understand how the Battle of the Plains of Abraham could have been fought on top of a rock on which stood the city of Quebec had his difficulty solved when he saw the landscapes of eighteenth-century Quebec and its environs. And the more subtle impediments to the pupil's appreciation of the vital and human character of the subject-matter of history are most readily removed by his becoming familiar with portrait, historical painting, or *tableau-de-moeurs*. For the more advanced investigator the pictures provide both that indefinite but important element sometimes designated atmosphere, and also innumerable *minutiae* of fact, interesting and occasionally very valuable, which escape the written description.

In its pictorial as in its other records the Department of Public Archives performs a duty towards the future equally with the present.

"Men write on the earth in time their legend,
Then into earth's bosom sink to rest,
And after ages decipher slowly
The mingled scroll like a palimpsest."

That the scroll of our time may be fuller and clearer for the future historian than that of the past has been for us is one of the principal aims of Canadian archival labours. The department preserves contemporary portraits, contemporary landscapes, contemporary views of important events, with the same care as those of the past. Though neither the interest nor the utility of many of these may now be great, every year that passes gives an added value to the genuine record.

Some statements of a personal character should be added.

The compiler is responsible for the form and content of the following catalogue. His work has been made possible, however, by the great assistance he has received from all other divisions of the Department of Public Archives, both in the central office in Ottawa and in the various offices located elsewhere. To the officers of all these

he wishes to express his thanks: in particular to Dr. H. P. Biggar, Chief Archivist of Canada in Europe, who facilitated the work of obtaining information from the libraries and other sources in Europe, read the proof, and made many valuable suggestions that have been incorporated into the text. He is also indebted to many persons outside the department for valuable help, and regrets that he must here confine his acknowledgments to but a few: Mr. J. de L. Taché, General Librarian of Parliament, Ottawa; Mr. H. O. McCurry, Secretary of the National Gallery of Canada, Ottawa; Mr. E. R. Greig, Secretary of the Art Gallery of Toronto; Mr. P. G. Roy, Archivist of the Province of Quebec; Mr. Ægidius Fauteux, Librarian of the Bibliothèque St. Sulpice, Montreal; Professor A. S. Morton, of the University of Saskatchewan, Saskatoon; Professor D. McArthur, of Queen's University, Kingston; Mr. Victor H. Paltsits, Chief of the American History Division and Keeper of Manuscripts, New York Public Library; Dr. J. C. Webster, Shediac, New Brunswick; Mr. G. Vanier, Paris, France.

The name of a man to whom very special obligations are due is omitted at his personal request.

Miss Jeanne Chenier and Mr. Norman Fee, of the Department of Public Archives, have been directly associated with the compiler in much of the work of cataloguing the pictures; Miss Chenier has also performed the very intricate task of typing the text for the printers, and Mr. Fee has read the proof. The care and courtesy that have been shown by the printers, and particularly by Mr. H. Ussher, in the execution of a difficult and tedious undertaking, should receive special acknowledgment.

INTRODUCTION

SELON les termes de l'acte qui les régit, les Archives publiques du Canada "sont composées de tels actes, documents publics et autres matériaux historiques de toute sorte, nature ou description qui, subordonnément aux dispositions de la présente loi, ou sous l'autorité de tout arrêté du Conseil passé sous son empire, sont placés sous la surveillance, la garde et le contrôle de l'Archiviste fédéral. Cet acte renferme une autre mesure autorisant l'archiviste du Canada—il porte maintenant le titre de conservateur des archives—à "acquérir pour les Archives publiques tous actes originaux, documents, et autres matériaux qu'il juge nécessaire et désirable de se procurer dans ce but; il peut en acquérir des copies, et tous cesdits actes originaux ou copies ainsi acquis font partie des Archives publiques."

Les Archives publiques, c'est à dire la section des services administratifs du gouvernement fédéral ainsi désignée, ne comprennent pas seulement le lieu où sont déposés les vieux documents du gouvernement; elles constituent également, pour la nation entière, une branche de l'histoire où sont conservés des renseignements de tous genres utiles à ceux qui étudient l'histoire du Canada.

Parmi cette documentation historique que renferment les archives publiques, on ne saurait passer sous silence la collection de tableaux et d'estampes. Il y a environ 1500 gravures encadrées, qui sont exhibées dans ce département, et à peu près 6000 gravures distinctes et non-encadrées; si, à cette galerie, on ajoute des estampes insérées dans des albums et des illustrations d'une valeur historique, la collection complète comprend plus de 25000 objets. De plus, il y a une série considérable de photographies, de feuilles imprimées et d'affiches qui se rapportent à la grande guerre et constituent une partie des objets déposés dans le musée de la guerre. Cette collection offre une variété d'illustrations depuis les peintures à l'huile—les unes d'une grande valeur artistique et historique—jusqu'aux esquisses au crayon et aux esquisses à la plume, sans oublier les aquarelles et les dessins au lavis; elle présente également une série d'objets d'art depuis de magnifiques gravures rares ainsi que des eaux-fortes jusqu'aux photographies modernes et aux photogravures de différentes espèces. Du point de vue chronologique, cette collection commence avec la vue et le plan d'Hochelaga, gravure publiée d'abord en 1556 dans les *Viaggi de Ramusio*, mais que l'on trouve dans l'édition de 1565. La collection renferme naturellement plusieurs estampes et dessins plus anciens que reproduisent des facsimilés ou d'autres copies d'une époque subséquente. Bon nombre de gravures et quelques peintures ont trait au régime français, mais l'immense majorité des illustrations se rapportent à la période qui suivit la reddition du Canada en 1760.

C'est en 1872 que fut établi le service des archives publiques. Toutefois on ne commença pas à colliger les gravures historiques avant la nomination du conservateur actuel des archives, en 1904, ou plutôt quelque temps après l'occupation, en 1906, de ce qui constitue aujourd'hui l'ancienne aile de l'édifice des archives. Alors la collection des gravures des archives ne comprenait que des illustrations dans les livres de la bibliothèque ainsi que quelques dessins et quelques photographies insérés dans des albums et conservés dans cette bibliothèque. En 1906, le ministre, qui administrait la branche des archives—c'est ainsi qu'on appelait alors cette institution—se convainquit, après avoir constaté notamment que certains particuliers avaient acquis une grande quantité de gravures et de tableaux très précieux se rapportant à l'histoire du Canada, que c'était le devoir du gouvernement de se procurer et de conserver de tels documents. En conséquence, on autorisa, pour la première fois, l'archiviste fédéral à acheter des peintures, des dessins et des estampes. Et c'est ainsi que depuis cette date, on a recueilli la collection qui se trouve aujourd'hui dans ce département. On a acheté la grande majorité des estampes et des tableaux; des agents du département ont fait une copie de quelques originaux déposés ailleurs; des donateurs présentèrent au Canada, par l'intermédiaire des archives, des tableaux au nombre desquels figurent quelques-uns des plus précieux objets de la collection. Voici les noms de quelques-uns de ces bienfaiteurs de la nation: le duc de Westminster, la marquise d'Aberdeen et de Temair, le comte Bathurst, le comte de Durham, le feu comte de Minto et Lady Minto, le feu comte Grey, le vicomte Rothermere, la feue vicomtesse Wolseley, Lord Lovat, Lord Beaverbrook, Sir Leicester Harmsworth, le feu Sir James Stuart, la succession du feu Sir Richard Scott, l'Hon. Charles Murphy, Mrs. Marslin, et beaucoup d'autres personnes dont les noms seront mentionnés dans le catalogue lorsqu'il sera question de leurs dons.

La collection comprend une grande variété d'objets; le département a voulu renseigner tous les chercheurs de bonne foi qui s'occupent de l'histoire du Canada.

La collection est riche en portraits notamment. Parmi les portraits originaux à l'huile et les aquarelles, il convient de mentionner le "Louis XIV," de Van Loo; la copie que Brompton fit de son "Sir Charles Saunders;" "Hugh Debbieg," de J. Green; "Sir James Stuart," de Théophile Hamel; "Thomas D'Arcy McGee," de D. J. Hurley; la copie que A. D. Patterson fit de son "Sir John A. Macdonald;" le "Dr. Kingsford," de Moss; "Chief Justice Armour,"

de Wyly Grier; "Lady Aberdeen," de Trityllis; et un portrait, sans signature, de Douglas Brymner, le premier archiviste fédéral. Il y a aussi plusieurs intéressants portraits français gravés du XVII^e et du XVIII^e siècles, et de nombreux portraits anglais des XVII^e, XVIII^e et XIX^e siècles. On trouve aussi de nombreux portraits canadiens de l'époque actuelle; toutefois il faut admettre qu'il y en a très peu d'une haute valeur artistique. Comme représentations d'événements historiques, la collection offre "Landing of Wolfe at Quebec," de Copley; "Death of Simon Fraser," de Benjamin West; "Red River Expedition, 1870," de Mrs. Hopkins; "Surrender of Pound Maker," de Rutherford; une série d'aquarelles, dont l'auteur est peut-être Peter Rindisbacher, représentant quelques phases du voyage des colons suisses se dirigeant vers la rivière Rouge, en 1821; les esquisses que fit Sydney Hall de 1878 à 1881; des peintures de scènes historiques des premiers temps de la colonie, œuvres d'artistes canadiens de l'époque actuelle, comme Jefferys et Reid; beaucoup d'autres dessins et gravures moins remarquables. Comme caricatures, la collection offre les fameuses séries "H. B.," plusieurs esquisses canadiennes de Bengough et d'autres caricatures intéressantes. Ce qui est aussi digne d'attention, c'est la série considérable d'illustrations se rapportant aux aborigènes—les Sauvages et les Esquimaux—à leur apparence individuelle, à leurs costumes et à leur mode d'existence. La section la plus importante de la collection est peut être celle qui comprend les tableaux représentant certains endroits. C'est ici que l'on peut admirer les très précieuses séries de vues, dessins originaux ou copies imprimées, dont les auteurs sont: Hervey Smith, Short, Peachey, Hunter, Fisher, Webber, Parkyns, Heriot, Gray, Cockburn, Back, Coke Smyth, Bainbrigge, Murray, Sproule, Duncan, Warre, Lady Falkland, Mrs. Hall, Petley, Bartlett, Krieghoff, Kollner, Mrs. Bayfield, Paul Kane, Sir Edmund et Lady Head, Wakefield, Willis, Martindale, Baker, Holdstock, Sandys, L. M. Davis, Agnes Gardner King: voilà les noms de quelques-uns seulement de nos peintres de tableaux historiques. On y trouve également plusieurs paysages remarquables, œuvres de peintres contemporains canadiens, anglais ou autres. Et dans un résumé comme celui-ci, il faut nécessairement omettre de mentionner des centaines de gravures également dignes d'attention.

Au moment où l'histoire du Canada commençait à s'enrichir de documents, les principes du dessin et de la peinture étaient universellement admis. On avait pleinement développé la technique des peintures à fresque, et des peintures à l'huile sur bois ou sur toile. Il en était ainsi des tableaux connus sous le nom de "gouaches," et des

miniatures sur ivoire ou parchemin. Dans les pages subséquentes, il est quelquefois question de ces différentes expressions. Les genres qui se développèrent au XVIII^e et au commencement du XIX^e siècle furent le dessin au lavis et l'aquarelle; ils offrent un intérêt particulier à ceux qui étudient les documents de l'histoire du Canada. Comme les fournitures des aquarellistes étaient très maniables et très portatives, l'aquarelle devint le genre favori des artistes véritables ou des artistes en herbe qui se trouvaient sur les confins de la civilisation. Et c'est ainsi que nous possédons de nombreuses représentations de paysages canadiens, datant de la deuxième moitié du XVIII^e siècle et de la première moitié du XIX^e siècle, que nous ont laissées des voyageurs, des officiers civils et militaires et même des colons établis sur ces territoires, alors frontières éloignées de l'empire. D'une manière générale, les aquarelles que renferme cette collection ont une valeur topographique plutôt qu'artistique; toutefois il y en a quelques-unes de George Heriot, de J. Cockburn et de Henry J. Warre notamment, que l'on aime à regarder. Comme portrait peint à l'aquarelle, le portrait de Hugh Debbieg, par Green, offre un bel exemple d'un travail achevé.

Avant les progrès de la photographie, la science de décrire un lieu avec précision et de le représenter graphiquement sur le papier était une matière qu'il fallait enseigner aux officiers militaires, aux officiers de la marine, aux ingénieurs civils et à presque toutes les personnes qui s'occupaient de travaux se rapportant aux sciences appliquées. Ces personnes purent ainsi faire des dessins qui, en leur qualité de documents topographiques et architecturaux, offrent autant d'intérêt que les photographies; quelquefois même, ils présentent plus de détails et de précisions que les photographies elles-mêmes. Telles sont bien les caractéristiques des œuvres de Richard Short, de Hervey Smith, de James Peachey, de J. Hunter, de G. J. Parkyns, de A. J. Russell, de même que certains dessins de George Heriot et plusieurs autres dessins à la plume, des dessins au crayon et des aquarelles.

Les progrès de la photographie, cela va sans dire, ont opéré, pendant les dernières soixante-quinze années, une révolution dans la manière de représenter graphiquement un lieu sur du papier. Ils ont également transformé les procédés employés pour l'impression des images.

Le lecteur qui s'intéresse à l'histoire et à la technique de l'imagerie devrait consulter quelques-uns des nombreux ouvrages spéciaux sur ce sujet. Mais, afin de guider ceux qui se serviront du catalogue qui suit cette introduction, il nous a semblé qu'il convenait de donner, de cette technique, un résumé tout à fait succinct sans prétendre vider la question.

Du point de vue de la publication, on peut diviser en deux catégories les estampes: celles qu'on publie séparément, et celles qui sont intercalées dans le texte d'un livre ou d'une revue. Il y a souvent très peu de différence spécifique entre les estampes de l'une et l'autre classe; mais d'une façon générale, il faut admettre que la gravure distincte possède une certaine valeur intrinsèque, habituellement d'ordre artistique. D'autre part, les qualités importantes des illustrations que renferment les livres sont: la précision des détails, un prix de revient peu élevé, et la possibilité de servir à de nombreuses reproductions sans subir une sérieuse détérioration. L'historien attache une égale importance à l'illustration et à l'estampe distincte.

On divise ces estampes en deux autres catégories: 1^o les œuvres artistiques originales sortant des mains de celui qui prépare la planche et dont l'unique objectif est l'illustration imprimée; 2^o les reproductions, faites par un graveur, de peintures ou de dessins d'un autre artiste. Sur les anciennes gravures, on peut lire ordinairement les noms de l'auteur et du graveur; quelquefois elles portent même trois noms: le nom de celui qui a fait la peinture; le nom du dessinateur qui modifia les lignes de l'image afin d'en tirer plus facilement des reproductions; le nom du graveur qui fit la planche. En plusieurs circonstances, l'artiste fit son tableau avec l'intention d'en tirer des copies; il travailla alors en une si intime collaboration avec le graveur que la gravure finale appartient véritablement à la première catégorie précitée.

Lorsque l'art de la gravure était au berceau, le mot "épreuve" signifiait les impressions que prenait le graveur pour connaître le degré de perfection de son travail. De nos jours, on emploie ordinairement ce mot pour désigner les premières feuilles tirées sur une planche gravée; elles sont faites d'un papier spécial et se vendent plus cher que les copies subséquentes.

La première espèce de gravure d'une importance pratique fut la gravure sur bois (woodcuts). Son origine en Europe remonte au commencement du XV^e siècle; tout d'abord ce genre atteint son apogée avec le grand artiste allemand, Albrecht Dürer (1471-1528). Le XVI^e siècle vit la floraison de ces gravures qui servirent à illustrer de nombreux livres; le XVII^e et le XVIII^e siècle marquèrent le déclin de ce genre qui continua toutefois à fournir des illustrations de deuxième ordre. Dans la gravure sur bois, le dessin qui doit être reproduit est taillé "en relief" sur une des faces de la planche: on ne touche pas aux parties de la surface qui recevront l'encre, mais on sculpte celles qui laisseront un espace blanc sur le papier. Ugo

da Carpi (1455?-1523?), Lucas Cranach (1472-1553), et d'autres personnes développèrent une méthode d'imprimer des gravures de différentes teintes; c'est ce qu'on appelle graver en clair-obscur ("in chiaroscuro.") On obtenait ce résultat en employant plusieurs planches et différentes teintes d'encre pour chaque gravure; on taillait la surface entière de chaque planche sauf les parties qui communiqueraient à la feuille une des teintes de la gravure. Plus tard, on employa ce procédé pour fabriquer des estampes coloriées.

La gravure sur métaux genre de gravure en creux ("intaglio") dispose de procédés diamétralement opposés à ceux de la gravure sur bois; on taille, sur la surface de la planche, le dessin qui doit être reproduit. Après avoir répandu de l'encre sur la planche, on essuie cette surface; elle ne fait donc aucune impression, tandis que l'encre qui demeure dans les incisions se communique au papier. Pour obtenir de bons résultats on doit soumettre la planche à une forte pression lorsqu'elle touche au papier; comme conséquence, on peut généralement savoir si l'imprimeur a eu recours à une planche métallique en constatant les indentations que les bords de cette plaque laissent sur la marge de la feuille. Toutefois ces indentations disparaissent facilement lorsqu'on se sert d'un papier d'une qualité spéciale.

Hormis quelques années du XIX^e siècle, on se servit ordinairement du cuivre pour l'intaille. Peu de temps après l'apparition des gravures sur bois, on employa, au XV^e siècle, des planches de cuivre pour la fabrication des gravures. Elles étaient caractérisées par ce qu'on a appelé la "gravure au trait" (line-engraving) c'est à dire une ligne qu'un instrument à pointe, comme le burin, forme sur la surface du métal. De fait, les graveurs au trait ont toujours utilisé, sauf à la naissance de cet art, une quantité variable d'acide pour faire des incisions dans le métal; mais si cette planche présente, comme caractéristique, la ligne que trace le burin, on dit alors qu'elle est gravée au trait. Depuis le commencement du XVI^e siècle, la gravure au trait constitua probablement le genre qui produisit le plus grand nombre d'estampes quoique l'excellence de l'exécution variât avec le temps. La gravure au physionotrace (outline engraving) populaire en France, vers 1800, n'est qu'un genre de gravure au trait.

La gravure à l'eau-forte (etching) est l'art de faire des incisions sur la planche en employant principalement—sinon exclusivement—un acide. En voici la technique essentielle. On enduit la planche d'une mince couche d'une substance composée d'un mélange de cire, de gomme, de résine et quelquefois de suif; on trace le dessin à travers cette substance au moyen d'une aiguille ou de tout autre

objet; on jette ensuite l'acide sur la planche et il mord les parties exposées du métal. Une autre manière de graver analogue à la technique de la gravure à l'eau-forte est la gravure à la pointe sèche (dry-point); elle consiste à reproduire le dessin sur le cuivre nu au moyen d'une pointe aiguë semblable à la pointe employée pour la gravure à l'eau-forte, mais beaucoup plus résistante et plus dure. Les procédés de la gravure à la pointe sèche ne diffèrent pas essentiellement des procédés de la gravure au trait, mais les résultats de ces deux opérations présentent deux aspects bien différents. Les gravures à l'eau-forte datent de la fin du XV^e siècle ou du commencement du XVI^e siècle. Cet art atteint son apogée au XVI^e siècle avec Rembrandt. Il passe ensuite par une période de déclin, jusqu'au XIX^e siècle où il connut une régénération. S'il n'y a plus guère de graveurs au trait aujourd'hui, il existe encore d'assez nombreux graveurs à l'eau-forte qui s'occupent de cet art pour des motifs d'ordre esthétique.

Ce qui contribua puissamment à développer tout d'abord l'art de la gravure, ce furent les éditeurs qui demandèrent des illustrations pour les livres qu'ils publièrent en si grand nombre au XVI^e siècle. Les livres qui intéressent particulièrement l'historien américain sont les ouvrages géographiques de l'époque: les publications d'Ortelius, de Mercator, d'Hondius et des De Bry où sont insérées de nombreuses cartes et des illustrations gravées.

En même temps le public réclama un plus grand nombre de gravures distinctes; il en résulta une nouvelle profession: le marchand d'estampes. Assez souvent les premiers marchands d'estampes furent simultanément graveurs et imprimeurs, comme Hieronymus Cock d'Anvers; la famille des Galle, du même endroit; la famille des Sadeler de Bruxelles et d'Anvers; les frères Wierix d'Anvers; la famille des Van de Passe d'Utrecht, qui avaient des maisons temporaires en Allemagne, en France, en Angleterre et au Danemark; Balthasar Moncornet, de Paris, l'auteur d'un si grand nombre de gravures.

Au XVII^e siècle, le public réclamait des illustrations, et les peintres désiraient augmenter le nombre de leurs admirateurs; il en résulta un progrès remarquable de l'art de reproduire des tableaux par le moyen de la gravure. Raphael réunit quelques graveurs afin d'avoir des copies de ses peintures, mais ce furent surtout Rubens et Van Dyck qui contribuèrent à développer ce genre. Aussi longtemps que les gravures rapportèrent quelque avantage pécuniaire, la plupart des meilleures gravures furent des copies d'œuvres d'art. Les portraits notamment jouissaient d'une grande vogue. Rembrandt et Van

Dyck avaient montré le merveilleux parti qu'on pouvait tirer de l'eau-forte dans la fabrication des portraits. Toutefois ce furent les graveurs au burin de la France de XVII^e siècle, Nanteuil entre autres, qui, avant les progrès de la gravure en teintes, firent les plus belles copies de portraits peints.

La reproduction de tableaux par la gravure suscita des recherches pour trouver une manière de reproduire les teintes avec plus de précision que par l'emploi des lignes. A la gravure en clair-obscur, succéda la gravure en manière noire (mezzotint), une nouvelle méthode de graver qu'inventa, vers 1642, Ludwig Von Siegen, natif d'Utrecht, et que le prince Rupert introduisit en Angleterre. Les teintes dans une gravure en manière noire sont imprimées au moyen d'un cuivre grené. On prépara les premières plaques en grenant les parties qui devaient laisser des ombres sur la feuille, mais on adopta bientôt la méthode inverse qui consiste à grener tout le cuivre et à polir ensuite dans une mesure proportionnelle à l'intensité du blanc qu'on veut obtenir. Les graveurs constatèrent que l'on pouvait employer cette méthode avec succès pour la portraiture. Elle fut en grande faveur pendant deux siècles, en Angleterre notamment; comme la gravure à l'eau-forte, on l'emploie encore pour des motifs d'ordre artistique.

Un autre genre important de gravure en teintes fut la gravure en manière de crayon ("chalk," or "crayon," manner), inventée en France vers le milieu de XVIII^e siècle; c'était une imitation du dessin au crayon. C'est véritablement un genre de gravure à l'eau-forte; au lieu de tailler des lignes sur la surface de la planche, on couvre cette surface de points noirs; souvent il y a une différence à peine perceptible entre ce genre de gravure et la gravure au vernis mou, une autre innovation du XVIII^e siècle. La gravure au pointillé (stipple) genre inventé dans la deuxième moitié du XVIII^e siècle, comporte une technique et produit des résultats analogues à la gravure en manière de crayon; toutefois elle a pour objet, non pas la copie des crayons pastels, mais plutôt l'imitation de tableaux. Dans ce catalogue, la rubrique "gravures au pointillé" comprend les gravures en manière de crayon et au pointillé. Ce dernier genre, de même que la gravure en manière noire, furent employés, en Angleterre notamment, et atteignirent leur apogée à partir de 1772 jusqu'à 1810; le graveur italien, Francesco Bartolozzi, est le plus illustre représentant de cette école.

Entre les années 1760-1770, les graveurs français adoptèrent définitivement, comme méthode de produire des estampes, la gravure à l'aquatinte, (aquatint), autre genre remarquable de gravure en

teinte; on pourrait toutefois trouver, ici et là, des gravures à l'aquatinte et au pointillé qui datent d'une période beaucoup plus reculée. Voici les principales opérations propres à la gravure à l'aquatinte. On enduit la planche de sable fin ou de résine pulvérisée qui adhère temporairement à la surface métallique lorsque celle-ci est chauffée. On plonge ensuite le cuivre dans un bain d'eau-forte. Comme dans tous les autres systèmes de gravure à l'eau-forte, on obtient une variété de teintes en protégeant par le vernis—entre chaque bain d'eau-forte—les parties de la planche qui présentent des morsures suffisantes. L'aquatinte convenait tout spécialement à la reproduction d'aquarelles; elle intéresse tout particulièrement l'amatuer canadien, car elle sert à reproduire de nombreux paysages du Canada primitif. L'aquatinte eut une valeur commerciale jusqu'à l'année 1830, ou à peu près; la lithographie devint alors le genre en vogue.

Très souvent les graveurs combinèrent ces différentes méthodes et produisirent une seule planche après avoir eu recours à la technique de deux genres ou plus: gravure au trait, au pointillé, en manière noire, à l'aquatinte.

La gravure en couleur, (colour-printing), c'est à dire la gravure à la préparation de laquelle des encres de différentes couleurs ont concouru, fit sa première apparition avant le XVIII^e siècle; mais c'est pendant ce siècle qu'elle connut la célébrité. Elle fut très populaire depuis 1770 jusqu'à 1815. Elle était ordinairement tirée sur des planches gravées en manière noire, au pointillé ou à l'aquatinte. Quelquefois on se servait d'une planche que l'on enduisait d'encre ou que l'on coloriait à la main après chaque impression; quelquefois on employait une planche distincte pour chaque couleur, procédé analogue à celui dont on se servait pour graver en clair-obscur. On avait quelquefois recours à la superposition des couleurs en vue d'obtenir des gammes de couleurs élémentaires.

On ne doit pas confondre les gravures en couleur avec les gravures coloriées. Pendant longtemps on a colorié à la main des gravures de tout genre, et notamment des aquatintes et des mezzo-tinto. Il existe de très belles aquatintes du Canada primitif coloriées par des contemporains.

Au XIX^e siècle l'augmentation du nombre de livres illustrés et de revues fut suivie d'innovations importantes de la gravure. Entre autre choses, il y eut une renaissance de la gravure sur bois; l'art consommé d'un graveur anglais, Thomas Bewick (1753-1828), en fut la cause principale. En Amérique notamment, les graveurs sur

bois acquirent une dextérité et une remarquable célérité d'exécution, et les gravures sur bois illustrèrent de nombreux journaux et des revues. Ce genre se développa davantage grâce à une nouvelle méthode inventée vers 1860; elle consiste à juxtaposer plusieurs planches en vue de former une seule image. Jusqu'à cette date, la superficie d'une gravure sur bois ne pouvait dépasser la superficie d'un morceau de bois, coupé en travers et mesurant environ dix pouces et demi de diamètre. Mais peu de temps après 1880, les procédés photographiques produisirent des estampes qui remplacèrent, comme valeur commerciale, les gravures sur bois.

Une autre innovation du début du XIX^e siècle fut de substituer, dans une certaine mesure, des plaques d'acier aux plaques de cuivre, à la gravure à l'eau-forte, au pointillé, au mezzo-tinto et notamment à la gravure au burin. Les plaques de cuivre se détérioraient facilement lorsqu'on s'en servait, mais des plaques d'acier, on pouvait tirer des centaines et des milliers de gravures sans trop altérer le dessin original. L'emploi de procédés de mécanique et l'habileté technique que les graveurs sur acier acquéraient—progrès analogue à celui des graveurs sur bois—furent la cause d'une immense production de gravures sur acier depuis le moment où l'acier se substitua au cuivre, en 1820, jusqu'à 1860 ou à peu près.

Le premier genre d'impression d'images, distinct de la gravure, fut la lithographie (lithography), qu'inventa, en 1796, Alois Senefelder de Munich. Grâce à cette invention, l'impression se produisit au moyen de la surface d'une pierre (ou de plaques métalliques spéciales) ayant une affinité avec deux substances qui d'ordinaire ne se mélangent pas: l'eau et la graisse. On trace directement un dessin sur la surface d'une pierre lithographique au moyen d'un crayon gras ou d'une encre grasse; on peut aussi tracer ce dessin sur une feuille que l'on applique ensuite sur la pierre. Lorsqu'il s'agit d'imprimer ce dessin, on répand de l'eau et de l'encre sur la surface de la pierre avant chaque impression; les parties non marquées retiennent l'eau, tandis que celles qui ont absorbé la graisse retiennent l'encre. On développa cette méthode en enduisant la surface de la pierre d'un mélange d'acides qui augmente l'affinité des parties non marquées avec l'eau et la répulsion entre les parties grasses et l'eau; le dessin devient même gravé quelque peu en relief. La lithographie connut une vogue considérable, en France principalement depuis 1825 jusqu'à 1875. On constata qu'elle pouvait rendre de grands services à la chromo-lithographie lorsqu'on employait une pierre distincte pour chaque couleur; on produisit, entre 1855 et 1875 notamment, de magnifiques dessins en couleurs.

Au XVIII^e siècle et au commencement du XIX^e, Paris et Londres devinrent les deux grands centres de production d'estampes; cette dernière ville était plus riche que Paris en gravures ayant trait au Canada. Voici quelques-uns des importants imprimeurs et marchands de gravures: Thomas Jefferys, mort en 1771; l'intérêt qu'il portait pour l'Amérique au moment de la guerre de Sept-Ans l'incita à produire d'importantes cartes géographiques et des gravures; Carrington Bowles; John Boydell (1719-1804); Rudolph Ackermann (1764-1843); C. J. Hullmandel (1789-1850); William Day et Louis Haghe; Vincent Brooks: tous ces individus vécurent à Londres. Voici les noms de quelques imprimeurs parisiens et marchands de gravures de la première moitié du XIX^e siècle: F. S. Delpech, R. J. Lemercier et Arthur Goupil. Vers le milieu du même siècle, on imprima à New York plusieurs estampes canadiennes. Au même moment, cette industrie s'implantait au Canada, et tout particulièrement à Montréal, quoique la première gravure semble avoir été faite à Halifax, vers 1816.

Depuis 1885, ou à peu près, ce sont des procédés photographiques (photographic processes), qui ont fourni la majorité des estampes et des reproductions. Ces méthodes ressemblent à celles des anciens graveurs et des lithographes d'autrefois, mais c'est la photographie qui accomplit le travail essentiel. En voici les principales opérations: un mélange de bichromate de potasse avec de la gélatine, de l'albumine ou des substances analogues, se durcit par la lumière et devient insoluble dans l'eau. Lorsque, au moyen d'une plaque photographique —et selon qu'on emploie la méthode positive ou négative, directe ou renversée—on expose ce mélange à la lumière, on obtient une surface dure ou molle qui correspond exactement à la transparence ou à l'opacité de la plaque photographique.

Voici les trois méthodes générales des photograpeurs:

1—Les procédés à base de surface plane ou presque plane servant à l'impression; la lithographie emploie un procédé analogue. La collotypie, (collotype) ou phototypie, (phototype)—l'héliotypie, (heliotype), ne constitue qu'un genre de collotypie est un procédé ayant pour base un cliché en gélatine dont on se sert pour l'impression à la manière des lithographes: les parties molles retiennent l'eau: les parties dures, l'encre. Le mot photolithographie, (photo-lithography), désigne quelquefois le procédé suivant: on pose un négatif photographique sur une plaque métallique sensibilisée ou une pierre lithographique enduite d'une pellicule collodionnée. On se sert également de ce mot pour désigner cet autre procédé: sur

une feuille de papier, on photographie le dessin que l'on communique ensuite à la pierre lithographique.

(2)—Les procédés ayant pour base une planche en relief qui reçoit l'encre selon le procédé de la gravure sur bois. Pour l'impression des dessins exécutés en traits (line-printing), on emploie de l'albumine pour enduire les plaques de cuivre ou de zinc. Lorsque ces planches ont été exposées à l'action de la lumière, l'eau enlève les parties molles de l'albumine tandis que les parties dures adhèrent à la plaque et reproduisent les lignes du dessin original. On plonge ensuite la plaque dans un bain d'acide; comme les parties recouvertes d'albumine durcie résistent à l'action de l'acide, la plaque finit par présenter des caractères en relief. De même que la gravure en manière noire et la gravure au pointillé succédèrent à la gravure au burin, l'impression de dessins exécutés en traits fut suivie de la photocollographie (half-tone printing), qui eut également pour objet la reproduction des teintes des illustrations. Pour obtenir ce résultat, on prend la photographie d'une image en interposant entre celle-ci et l'objectif une plaque de verre recouverte d'un réseau de lignes minuscules. Quand l'épreuve négative qui en résulte reçoit la quantité nécessaire d'albumine on obtient une plaque gravée à l'eau-forte et couverte de petits points dont la densité varie selon les traits de l'image originale. Cette méthode appliquée à la chromotypie a produit d'assez satisfaisants résultats, surtout lorsqu'on l'a employée pour le "procédé relatif aux trois couleurs:" on photographie successivement chacune des trois couleurs élémentaires et on les imprime superposées sur une même feuille de papier; on obtient ainsi des teintes, procédé analogue à celui des graveurs en couleur du XVIII^e siècle. La méthode moderne produit des résultats beaucoup plus satisfaisants parce que les trois épreuves différentes, prises par l'intermédiaire de verres qui ne laissent passer que les rayons de leur coloration propre, présentent une analyse des couleurs des images avec une précision qui surpasse celle de l'œil humain.

(3)—Les procédés ayant pour base les tailles; l'impression se fait au moyen d'une encre qui demeure dans des incisions de la plaque, procédé analogue à celui des anciens graveurs sur métal. Le plus important de ces genres est la photogravure: on jette d'abord une poudre sur la surface du cuivre, à la manière des graveurs à l'aquatinte. Cette poudre adhère au cuivre tandis que l'eau enlève la gélatine. Après avoir plongé dans un bain d'eau-forte, cette plaque couverte de poudre, elle présente une surface grenée dans toutes les parties exposées à l'action de l'acide. La photogravure est le meilleur procédé pour reproduire les teintes; elle est toutefois incapable de rendre les couleurs.

LOUIS XIV SENDS THE BRIDES
TO CANADA

Water-colour by C. W. Jefferys

On emploie plusieurs procédés pour prolonger la durée d'une plaque. Par l'électrolyse, on applique une couche légère d'acier sur la plaque de cuivre munie de tous ses caractères; on se sert également de ce procédé pour les plaques gravées à la main. Voici une autre méthode adoptée: on ne se sert des plaques originales que pour faire des moules dans lesquels on dépose, par le moyen de l'électrolyse, les plaques qui doivent servir à l'impression.

Il est quelque peu difficile de classifier les gravures produites par des procédés photographiques: on a souvent donné des noms différents au même procédé; d'autre part, on a souvent modifié quelque peu ces procédés, et l'on changeait ainsi l'apparence d'une estampe lorsqu'elle était terminée. Quelques-unes de ces modifications constituaient des secrets de métier.

Dans le catalogue qui suit, on a, autant que possible, classifié les estampes d'après les caractères techniques que chacune suggère à ceux qui les étudient.

De nos jours, on fait grand cas des illustrations documentaires. Nous vivons à une époque que caractérisent la renaissance et la diffusion extraordinaire des images employées pour illustrer l'exposé des faits ou des fictions. En ce qui concerne l'histoire, l'exposition de gravures, l'emploi de plaques de lanterne magique et l'usage du cinéma même manifestent ce nouvel intérêt. Les savants consultent de plus en plus la collection des Archives publiques; elle leur fournit des matériaux pour illustrer leurs livres et agrémenter leurs conférences par des projections. Chaque année, les instituteurs d'Ottawa et des environs conduisent aux Archives des centaines d'élèves pour leur montrer l'exposition des peintures, des dessins, des gravures et des cartes qu'on peut voir en cet endroit; les témoignages de ces maîtres, attestant l'utilité de cette exposition pour l'enseignement de l'histoire du Canada, sont des indices révélateurs. L'enfant qui ne comprenait pas comment on avait pu livrer la bataille des plaines d'Abraham sur le sommet d'un rocher servant de fondement à la ville de Québec, voit sa difficulté disparaître quand il regarde un tableau représentant l'étendue de pays autour de la ville de Québec et de ses environs, au XVIII^e siècle. Et lorsque l'élève prend connaissance des portraits, des peintures historiques ou des "tableaux de mœurs" des époques antérieures, il peut résoudre immédiatement des objections plus spécieuses qui l'empêchaient d'apprécier à leur juste valeur les éléments vitaux et humains qui constituent la matière de l'histoire. Aux chercheurs plus férus de connaissances, la collection des Archives permet de connaître un élément vague mais important

dans l'étude de l'histoire: l'atmosphère historique; elle leur fournit également l'occasion de noter d'innombrables détails se rapportant à des faits, questions intéressantes et souvent très utiles qu'on ne saurait trouver dans les livres.

En compilant les gravures et les autres pièces historiques, le ministère des Archives publiques rend service aux générations présentes et futures. Le poète anglais a écrit:

"Men write on the earth in time their legend,
Then into earth's bosom sink to rest,
And after ages decipher slowly
The mingled scroll like a palimpsest."

L'un des principaux objectifs de l'archiviste canadien et de ses adjoints, c'est de faire en sorte que les documents contemporains offrent à l'historien de demain plus de précisions que l'historien d'aujourd'hui n'en trouve dans les documents des époques antérieures. Le ministère conserve, avec le même soin que s'il s'agissait de gravures anciennes, les portraits et les paysages contemporains de même que les illustrations d'événements importants de l'époque actuelle. Plusieurs de ces objets d'art ne sont peut être pas d'une grande utilité et d'un grand intérêt aujourd'hui, mais avec le temps, ils acquièrent une valeur documentaire.

Il n'est pas hors de propos d'ajouter quelques explications d'un ordre moins général.

C'est le compilateur qui a été chargé de la rédaction et de la disposition du catalogue qui suit. Toutefois l'aide qu'il reçut de toutes les branches du ministère des Archives publiques, soit dans le bureau-chef à Ottawa, soit dans les autres bureaux situés ailleurs, lui a permis d'achever ce travail. L'auteur désire remercier ces fonctionnaires et notamment le Dr H. P. Biggar, archiviste en chef du Canada, en Europe, qui facilita la tâche de l'auteur en obtenant des renseignements dans les bibliothèques et en consultant d'autres sources en Europe; il corrigea aussi les épreuves de ce livre et fit de nombreuses suggestions qui furent intercalées dans le texte. Le compilateur a aussi acquis une dette de reconnaissance envers plusieurs personnes qui ne sont pas membres du personnel des Archives et qui lui ont prêté leur précieuse collaboration. L'auteur regrette de ne pouvoir mentionner que les noms suivants: M. J. de L. Taché, Bibliothécaire général du parlement à Ottawa; M. H. O. McCurry, secrétaire de la galerie nationale de tableaux du Canada, à Ottawa; M. E. R. Greig, secrétaire de la galerie des arts, à Toronto; M. P. G. Roy, archiviste de la province de Québec; M. Ægidius Fauteux, bibliothécaire de la

bibliothèque St. Sulpice, à Montréal; M. le professeur A. S. Morton de l'université de Saskatchewan, à Saskatoon; M. le professeur D. McArthur de l'université Queens à Kingston; M. Victor H. Paltsits, chef de la division de l'histoire américaine et conservateur des manuscrits, à la bibliothèque publique de New-York; le Dr J. C. Webster, à Shediac, Nouveau-Brunswick; M. G. Vanier, à Paris, France.

Il a été nécessaire d'omettre le nom d'un homme à qui l'auteur a de grandes obligations, et qui a lui-même demandé que son nom ne fût pas mentionné.

Mademoiselle Jeanne Chénier, du ministère des Archives publiques, catalogua bon nombre d'estampes, en collaboration avec le compilateur; elle a accompli la tâche vraiment ardue de dactylographier le texte pour l'imprimeur. M. Norman Fee, du même ministère, catalogua aussi quelques estampes et corrigea les épreuves. Il convient de souligner le soin et la courtoisie des imprimeurs et de mentionner le nom de M. H. Ussher; grâce à leurs concours, l'auteur put mener à bien une entreprise difficile et fastidieuse.

EXPLANATORY NOTE TO PORTRAIT CATALOGUE

THE names of the persons whose portraits are in the collection are arranged in chronological order, according to the respective dates of death. A brief biographical sketch is given, indicating, if it seems advisable, the association of the subject with Canadian history. The catalogue is confined to portraits of persons having some "Canadian" interest, but a catholic interpretation has been given to this restriction. It may be noted that, beginning with 1492 A.D., all sovereigns of the British Isles, all persons through whom the crown of the United Kingdom has been inherited, all sovereigns and heads of the state in France, all the Presidents of the United States of America, and all the Popes, whose portraits are in the collection, have been included in the catalogue, even though, individually, some of them may have had no connection with Canada. The catalogue, however, is not designed to serve the purpose of a biographical dictionary, and, while reasonable care has been taken to ensure that these brief "lives" are trustworthy, they have received no special original investigation.

The portraits of each personage are arranged, generally, according to their dates, or the dates of the original paintings on which the pictures here noticed are based, so far as these dates are known. Occasionally this rule has been departed from for special reasons, and frequently the information necessary for its strict observance has not been available. Last in order are pictures of statues, medallions, and other graphic models.

The title and descriptive matter attached to each picture has been printed with indented margin. It is made up of the following parts:

- (1) The reference number, placed in the indented margin.
- (2) The title. In the case of prints, and of such drawings and paintings as have a written title imitating print, the title has been reproduced as exactly as typographical and space considerations will permit. The different sizes of type in the title as given by the catalogue do not represent exactly, but only relatively, those of the original title. Because of the fact that script type cannot be used in a limited space, it has been necessary to represent script by *Cheltenham Light Italic*. Dark face, shaded and outline types are represented by dark face, usually **Caslon Bold**.
- (3) Description of subject-matter of picture. The terms "r. hand" and "l. hand" indicate the right and left hands of the subject as he appears in the picture. But the terms "to r.," "to l.," indicate direction with reference to the spectator. The following abbreviations are used: H.L. = half-length; T.Q.L. = three-quarters-length, W.L. = whole-length.
- (4) Technical description and bibliographical information. In the Introduction some explanation is given of the various technical terms used. In this respect it has not been the aim to attain absolute and meticulous accuracy, but only to provide such a brief and trustworthy description as will be sufficient for practical purposes of identification or estimation of value. Dimensions are in inches, the perpendicular first, the horizontal second. The dimensions are those of the actual surface of the printed picture, not of the plate impression. In the case of prints which are not confined within a fixed line, the dimensions indicate approximately the space covered by the print. For the book-illustrations bibliographical references are given to those books which are to be found in the Archives library; but if the illustration is reproduced in many different books only those are mentioned which seem most important or most useful.

After the title and description of the picture, a note is sometimes attached giving its history, an estimation of its importance, or, more frequently, brief biographical sketches of the artist and the engraver.

NOTE EXPLICATIVE JOINTE AU CATALOGUE DES PORTRAITS

LES noms des personnes, dont les portraits figurent dans la collection, sont disposés dans l'ordre chronologique, selon la date du décès de chaque personne. On a rédigé une brève notice biographique de ces personnages; on a indiqué, quand on a jugé la chose nécessaire, les traits d'union entre ces personnages et l'histoire du Canada. Dans ce catalogue, on ne mentionne que les portraits de personnes qui intéressent les Canadiens, mais on doit donner un sens large à cette restriction. Il convient d'observer que l'on trouvera dans le catalogue le nom des portraits de tous les rois de la Grande-Bretagne, de toutes les personnes qui ont transmis la couronne du Royaume-Uni, de tous les rois et de tous les présidents de la France, de tous les présidents des Etats-Unis d'Amérique, et de tous les papes, depuis l'année 1492 A.D.; toutefois plusieurs d'entre eux n'ont eu, comme individus, rien à voir au Canada. Cependant ce catalogue ne prétend pas être un dictionnaire biographique; on s'est efforcé de présenter de brèves notices sans faire des recherches spéciales, aux sources mêmes.

Les portraits de chaque personnage sont généralement disposés selon leur date ou selon la date connue des peintures originales d'après lesquelles on a fait les copies ici mentionnées. Quelquefois l'auteur s'est écarté de cette règle, lorsqu'il avait des raisons spéciales d'agir ainsi; assez souvent, il n'a pu se procurer les renseignements nécessaires pour se conformer à cette règle. Après l'énumérateur des portraits, on trouve les titres des photographies des statues, des médailles et de quelques autres objets d'art graphique.

Le titre et les notes descriptives de chaque image, imprimés avec une marge spéciale renferment les renseignements suivants:

- (1) Le chiffre imprimé dans la marge spéciale et indiquant le renvoi.
- (2) Le titre. Quant aux estampes, et lorsque les dessins et les peintures ont des titres qui semblent imprimés, on a reproduit ces caractères avec autant d'exactitude que possible en tenant compte des exigences typographiques et de l'espace dont on pouvait disposer. Les différentes dimensions de caractères employés pour les titres que l'on trouve dans le catalogue ne sont que la copie approximative des titres originaux. Comme on ne peut imprimer l'écriture anglaise (script type) dans un petit espace, il fallut représenter cette écriture par les italiques, genre "*Cheltenham Light*." Le genre "*Caslon Bold*" représente ordinairement les caractères gras, ombragés ou ouverts.
- (3) Description du sujet de la gravure. Les expressions "r. hand," côté droit, "l. hand," côté gauche, indiquent le côté droit et le côté gauche du sujet tel qu'il apparaît dans l'illustration. Mais les termes "to r.," à droite, et "to l." à gauche, indiquent la direction qui se rapporte au spectateur. On se sert fréquemment des termes et des abréviations suivantes: "Head" = Tête; "Bust" = Buste; "H.L." (Half-length) = Portrait peint à mi-corps; "T.Q.L." (Three-quarters-length) = un trois-quarts; "W.L." (Whole-length)—Portrait en pied; full face = portrait de face; seated = assis.
- (4) Description technique et renseignements bibliographiques. Dans l'introduction, on explique certains termes techniques employés dans ce livre. A ce sujet l'auteur ne s'est pas proposé d'arriver à une précision absolue et méticuleuse, mais plutôt de présenter une description succincte et exempte d'erreurs qui, dans la pratique, suffise à ceux qui font des recherches d'identification ou qui veulent connaître la valeur de certaines gravures. Les dimensions sont données en pouces; on mentionne d'abord la perpendiculaire puis la ligne horizontale. Par dimensions, nous entendons la longueur et la largeur de la surface véritable de l'estampe et non pas la longueur et la largeur de la plaque impressionnée. Au sujet des estampes non délimitées, leur superficie est approximativement indiquée par des dimensions données. En ce qui concerne les illustrations insérées dans les livres, le lecteur trouvera à leur sujet des renvois aux ouvrages qui sont dans la bibliothèque des Archives. Mais si ces illustrations sont reproduites dans plusieurs livres différents, il n'est fait mention que de ceux qui semblent les plus importants ou les plus utiles.

Au titre et à la description, on a quelquefois joint une note qui résume l'histoire et marque l'importance de la gravure; plus souvent, on donne une brève notice biographique de l'artiste et du graveur.

LEIF ERICSSON

Fl. c. 1000

From the tenth to the fifteenth centuries Norse settlements existed on the south-west coast of Greenland. There are traditions of voyages made to lands more remote, which are believed to have been parts of the continent of America. One of these lands, Vinland, or Wineland, was discovered, according to Norse sources, by Leif, son of that Eric the Red who had founded the Greenland colony. The Icelandic Sagas say that Leif, apparently in 999, sailed from Greenland to Norway, and that, when returning in the following year, he was driven out of his course and came upon Vinland.

Anne Whitney (1821-1915), a native of Watertown, Massachusetts, began work as a professional sculptor in 1860. The statue of Leif Ericsson, an imaginary representation, is among her best works.

MARCO POLO

1254 — 1324 ?

A Venetian who travelled extensively in China and other parts of Asia about 1271 to 1295. His Book, dictated in 1298-9, was the greatest contribution made in the Middle Ages to European knowledge of the geography of the far East, and had an important influence on the early discoverers and explorers of America.

None of the extant portraits of Marco Polo is known to be authentic.

JEAN DE BÉTHENCOURT

C. 1360 — 1422

Jean de Béthencourt was one of the earliest of those Norman adventurers who did so much to extend French maritime power. He set out, in 1402, to conquer the Canary Islands, which had been discovered, or rediscovered, by Europeans early in the fourteenth century. He and his companion, Gadifer de La Salle, occupied several of the islands. In 1406 he returned to Normandy. The French retained

a precarious hold in the Canaries for some years longer, when they finally passed to the dominion of Spain.

Balthazar Moncornet (c. 1630–1670) was a Parisian engraver and printseller who produced a vast number of engraved portraits. Charles Paul Landon (1760–1826) was a French historical painter of some merit, but is better known as a writer on art.

PRINCE HENRY OF PORTUGAL

4 March 1394 — 13 November 1460

Prince Henry, called "the Navigator," was the son of John I, King of Portugal, and of Philippa, daughter of John of Gaunt, son of King Edward III of England. He distinguished himself in the wars against the Moors, but his fame rests chiefly on his work in directing maritime discovery. He promoted scientific studies at home, and sent out numerous expeditions for exploration and colonisation. The African coast was explored as far as the Gambia River, and the design adopted of reaching India by this southern route. The trade in negro slaves was inaugurated. In the Atlantic Ocean the Madeiras, the Azores, and the Cape Verde Islands were discovered, or rediscovered, and expeditions seem to have sailed even beyond the Azores.

Gomes Eannes de Azurara was a Portuguese historian of the fifteenth century. His *Chronica do descobrimento e conquista de Guine*, completed in 1453, exists in a magnificently ornamented manuscript copy, said to have been prepared for the royal library at Lisbon, now in the Bibliothèque Nationale, Paris. It has been suggested that the miniature of Prince Henry which it contains is due to a painter of the school of the Flemish artist Jan van Eyck, who visited Portugal in 1428. The portrait

is believed to represent the prince in mourning for his brother, Dom Pedro, who died in 1449.

TOSCANELLI

1397 — 15 May 1482

Paolo dal Pozzo Toscanelli was a native of Florence, a graduate of the University of Padua, and one of the most learned men of science of his day. Letters, the authenticity of which is generally, but not universally, accepted, are extant from him to Columbus, discussing the project of a western route to the Indies.

The portrait of Toscanelli was painted by Alessio Baldovinetti^{re} about 1471-1476. It no longer exists, but is believed to have been the model for that by Giorgio Vasari (1511-1574) in the Palazzo Vecchio, Florence, executed in 1569-1572.

The illustrations to this work are, for the most part, taken from the original German edition, *Allgemeine Weltgeschichte* (Berlin: 1884-1892).

JOHN CABOT

? — 1498?

Giovanni Caboto, or John Cabot, a mariner, Genoese by birth, became a citizen of Venice in 1476, and, apparently about 1484, settled in London. In 1497 he commanded a ship which sailed from Bristol and came to land somewhere within the present dominions of Canada and Newfoundland, the first European vessel recorded to have done so, at least since the time of the Norsemen. In 1498 he led a second expedition westward: but there is no certain information as to the outcome. The evidence suggests that Cabot, after exploring a considerable part of the North American coasts and returning to England, soon died.

POPE ALEXANDER VI

1 January 1431 — 18 August 1503

Rodrigo Llançol, usually known by his maternal name, Borja, or Borgia, was a Spaniard who became cardinal in 1456, and in 1492 was elected Pope. In April, 1493, he learned of the discovery of Columbus, and on May 3 and 4 issued two bulls by which he drew a line of demarcation one hundred leagues west of the Azores and granted to the sovereigns of Spain the same rights over lands discovered or to be discovered by them west of that line as had previously been granted to the Portuguese over their discoveries on the African route.

ISABELLA OF SPAIN

22 April 1451 — 26 November 1504

Isabella, daughter of John II, King of Castile, succeeded her brother, Henry IV, in 1474. In 1469 she had married Ferdinand, who became King of Aragon in 1479. The union of Spain was completed by the conquest of Grenada from the Moors in 1492. It was she who decided to equip the expedition of discovery proposed by Columbus, after his plans had been rejected by the officials of the Spanish court.

CHRISTOPHER COLUMBUS

1446 ? — 20 May 1506

Cristoforo Colombo, Cristobal Colon, or Christopher Columbus, the Discoverer of America, was a native of Genoa. His project of a westward voyage to India was adopted by the Spanish court in 1492:

on August 3 he sailed from Palos, and on October 12 discovered land, probably Watling Island in the Bahamas. After visiting others of the Bahamas, Cuba and Haiti, he returned to Europe, arriving at Lisbon on March 4, 1493. He made three more voyages to the New World, in 1493, in 1498—when he first reached the mainland—and in 1502.

Paolo Giovio, or Paulus Jovius (1480-1552), priest and author, gathered a large collection of portraits at his villa on the Lake of Como, Italy. In this gallery there was, in 1556, a portrait of Columbus. A painting now in the possession of the de Orchi family, of Como, is held to be the same portrait, inherited from the nephew and heir of Paulus Jovius.

In 1575 Petrus Perna, of Basle, issued an edition of Jovius' *Elogia Virorum* in which is a woodcut representation of Columbus, said to be reproduced from the portrait at Como. The engraver, it is believed, was Tobias Stimmer (1539-1592?), a Swiss artist.

Half-tone print : $6\frac{1}{8} \times 4\frac{1}{8}$. In Thacher, *loc. cit.* There is another copy in *The Dawn of Canadian History*, by Stephen Leacock (Toronto : 1914).

These prints are from a painting in the Uffizi Gallery, Florence, believed to be the copy of the Jovian portrait at Lake Como, made between 1552 and 1556 for Cosimo, Duke of Tuscany, by Cristofano di Papi, called "dell' Altissimo", a Florentine painter.

This portrait, now in the National Library, Madrid, was sold to the Spanish government in 1763 by Señor N. Yañez of Granada as an authentic portrait of Columbus. It was found to have been painted over, and the original was restored about 1875. This seems to be an Italian painting of the Jovian type, and the claim has been made that it is the original Jovius portrait.

Dirk, or Theodorus, De Bry (1528–1598) was an engraver, a native of Liège, who spent the greater part of his life at Frankfort. There, in 1590, inspired by the example of Hakluyt, he began the publication of a collection of voyages, illustrated by engravings, to which the title usually given is *Collectiones peregrinationum in Indiam orientalem et Indiam occidentalem*. The work, in Latin and German, was continued by his family, and completed in 1634. Part IV of the "America" section was published in 1594. This Columbus portrait is said to have been engraved by Adriaen Collaert, a Flemish designer and engraver of the second half of the sixteenth century, and to have been based upon a painting by Jan van der Straet (1523?–1605?), also known as Johannes Stradanus and as Giovanni della Strada, a native of Bruges, who lived in Italy the greater part of his life, where he became an artist of prominence.

This engraving appears in Part V of the "America" section of De Bry's *Voyages*, published in 1595. He states that it is from a copy of a painting made by order of the sovereigns of Spain before Columbus departed on his first voyage, a copy given by the artist himself to a friend of De Bry. There is no other record of any such contemporary portrait of Columbus, and this fact, together with obvious chronological and other difficulties, have rendered De Bry's story suspect. The original engraving was executed by De Bry's son, John Theodore De Bry (1561–1623).

Jean Jacques Boissard (1528–1602) was a French writer and antiquarian. The De Bry engraving of Columbus was printed in several works published under Boissard's name: *Icones et vitæ virorum illustrium* (Frankfort: 2nd part, 1597); *Bibliotheca sive thesaurus virtutis et gloriæ* (Frankfort: 1628–1634); and *Bibliotheca calographica* (Frankfort: 1650–1664). William Henry Worthington, an English line engraver, was born about 1795, and is known to have been doing work in 1833. His *Portraits of the Sovereigns of England* was published in London, 1824.

This portrait, now in the Metropolitan Museum, New York City, is said to have long hung in the château of Valençay, department of Indre, France, the property of the Duc de Talleyrand Valençay et Segan. It closely resembles, but is not identical with, that of Versailles. An inscription attributes it to "Sebastianus Venetus." Sebastiano Luciani (1485–1547), called Sebastiano del Piombo, was a native of Venice who went to Rome, worked for a time in conjunction with Michel Angelo, and was regarded, after the death of Raphael, as the most distinguished painter in Rome. If it is a genuine work of Sebastiano, it may be the original of the De Bry engraving, but need not have been painted as a portrait of Columbus.

This portrait was discovered in Venice about 1890 by the archæologist Antonio della Rovere, and came to the United States in 1892. It bears what purports to be the signature of Lorenzo Lotto, and a date, indistinct, which may be 1512. It is not certain that the subject is Columbus. Lorenzo Lotto (1480-1556), a Venetian by birth, is especially famous as a portrait painter.

This picture, now in the Museo Borbonico, Naples, formerly in the Farnese Gallery, is attributed to Francesco Mazzuola (1504-1540), called Il Parmigiano, a native of Parma. It is said to have been painted about 1527 for Cardinal Alexander Farnese; and also to be the portrait of a certain Gilberto de Sassuoli. William Oakley Burgess (1818-1844) was an English mezzotint engraver.

HENRY VII

28 January 1457 — 21 April 1509

Henry Tudor, son of Edmund Tudor, Earl of Richmond, and Margaret Beaufort, grand-daughter of John of Gaunt; head of the Lancastrian line after the death of Henry VI; and King of England after the defeat and death of Richard III at Bosworth Field, August 22, 1485. He authorised the expeditions of John Cabot, granted him a pension on his return from his first voyage, and by letters patent and largesses encouraged, throughout his reign, voyages of discovery to "the new found land".

AMERIGO VESPUCCI

9 March 1451 — 22 February 1512

Amerigo Vespucci, or Americus Vespuccius, a native of Florence and employee of the Medici, went to Spain, apparently in 1492, made voyages to the new world, and in 1508 was appointed chief pilot of Spain. Published accounts, attributed to him, describe his voyages of 1497, 1499, 1501 and 1503, but they are not considered trustworthy. They led, however, to the application of the name "America" to the new mainland by Martin Waldseemüller (c.1475-c.1522) in his map of the world and *Cosmographiae Introductio* of 1507.

61 [On scroll above figure] AMERICI VESPVCII

Martin Waldseemüller, who adopted the Graecized name "Iacomilus", was celebrated both as a humanist and as a cartographer. The only known copy of his map of 1507 was discovered in 1901 by the Rev. Joseph Fischer, S.J., in the castle of Wolfegg in Würtemberg. The portrait of Amerigo Vespucci which the map bears is probably wholly imaginary.

Giuliano della Rovere, a native of Albissola, near Savona, Italy, was created cardinal in 1471 and elected Pope in 1503. He succeeded

Pius III, who had been raised to the pontificate on the death of Alexander VI, but had reigned only twenty-six days. On November 15, 1504, he issued a bull creating an archiepiscopal see, with two suffragan dioceses, in the island of Hispaniola (Haiti). This bull remained inoperative, and the first dioceses actually to be erected in the New World, two in Hispaniola and one in San Juan (Porto Rico), were created on August 8, 1511.

Ugo da Carpi (1455?-1523?) was an Italian painter and engraver who is especially famous for his woodcuts. These were executed in chiaroscuro, by successive printings from two or more blocks of different shades.

- 71 JULIUS II | RAPHAEL, PITTI PALACE, FLORENCE

More than H. L.: to r.; seated.

Colour half-tone print : $6\frac{3}{4}$ x $5\frac{5}{8}$. Pl. to *The Catholic Encyclopedia*, vol. VIII (New York : [1910]).

Raphael Sanzio (5 April 1483-6 April 1520), one of the most famous of the artists of the Italian Renaissance, was a native of Urbino. His early work was done at Urbino, Perugia and Florence. From 1508 until his death he lived at Rome, where he was employed by the Popes Julius II and Leo X on a series of frescoes in the Vatican, and also executed a vast number of other masterpieces.

There are two replicas, almost equal in merit, of Raphael's portrait of Julius II. That in the Pitti Gallery, Florence, is considered to be a contemporary copy by an artist of the Venetian school, and that in the Uffizi Gallery of the same city is probably also a copy by a pupil or assistant of Raphael.

This picture is from the portrait of Julius II introduced by Raphael into the fresco "The Mass of Bolsena", in the Vatican, executed in 1512.

JAMES IV OF SCOTLAND

17 March 1473 — 9 September 1513

James, son of James III of Scotland and Margaret of Denmark, ascended the throne at the murder of his father in 1488. From his marriage in 1503 with Margaret, daughter of Henry VII of England, resulted, a century later, the union of the crowns of England and Scotland. He was killed at the battle of Flodden.

BARTHOLOMEW COLUMBUS

? — November 1514

Bartolomeo, or Bartholomew, a brother of Christopher Columbus, was a navigator and cartographer, and was Christopher's representative in an effort to obtain help from Henry VII of England. Returning, he learned of his brother's success and joined him in Haiti in 1494. He was appointed *adelantado* of the new dominion.

VASCO NUÑEZ DE BALBOA

C. 1475 — 1517

Balboa, a native of Jerez de los Caballeros, was a Spanish adventurer who came to the New World in 1501, settled in Haiti, and in 1510 established a colony at Darien. In 1513 he led an expedition which, on September 25 or 26, first sighted the Pacific Ocean. He was appointed "Adelantado of the South Sea" by King Ferdinand, but was put to death by his successor in the government of Darien.

LEONARDO DA VINCI

1452 — 2 May 1519

Leonardo was born near the town of Vinci in the territory of Florence. His life was spent in various parts of Italy and, towards the end, in France. He displayed an extraordinary combination of the highest talents, attaining eminence as artist, engineer, scholar and man of science. To him has been attributed a map of the world, drawn apparently about 1512-19, one of the earliest bearing the name America. It was found among Da Vinci's papers, and was probably executed for him if not actually his work.

Raffaello Morghen (1758-1833), a native of Florence, was one of the most celebrated engravers of his time. Authorities state that his portrait of Leonardo was after a painting by Baroccio (1528-1612), an artist of Urbino.

FERDINAND MAGELLAN

C. 1480 — 27 April 1521

Fernao de Magalhaes, Fernando Magellanes, or Ferdinand Magellan was a Portuguese who, after long service in the East Indies, fell into disfavour with the King of Portugal and offered his services to King Charles of Spain. He proposed to reach the Spice Islands, believed to lie on the Spanish side of the line of demarcation between the possessions of the two countries, by sailing westward. On September 20, 1519, he sailed from Spain; on November 28, 1520, he passed through the strait which bears his name and entered the South Sea, called by him the Pacific Ocean. On March 6, 1521, he arrived at the Ladrones Islands, and on April 27 was killed by the natives of one of the Philippines. One of his ships completed, for the first time, the circumnavigation of the globe, arriving in Spain on September 6, 1522.

VASCO DA GAMA

C. 1460 — 24 December 1524

Vasco da Gama, a Portuguese soldier and mariner, was placed in command of the expedition which sailed on July 9, 1497, with the design of completing the work of Prince Henry by opening a route to India by way of the African coast. On May 20, 1498, he arrived at Calicut on the Malabar coast. He made two more voyages to India, in 1502 and 1524, on the latter occasion as viceroy of India.

Pedro Barreto de Resende (d. 1651) went to India in 1629 as secretary to the Conde de Linhares, the viceroy. He wrote a history of the Portuguese viceroys, of which

what is believed to be the original manuscript, dated 1635, is in the Bibliothèque nationale, Paris—Fonds portugais, vol. I. There is a contemporary copy, catalogued as of 1640, in the British Museum, Sloane MS. 197. Both these codices are illustrated with somewhat crude miniatures, executed, apparently, by an Indian artist. They were copied from the portraits which hung in the palace of the viceroys at Goa.

GIOVANNI DA VERRAZANO

C. 1480 — 1528 ?

Giovanni da Verrazano was a Florentine mariner in the French service who, in 1524, sailed westward seeking a route to China. He discovered and explored the American coast, apparently from about North Carolina to about Cape Breton. He is believed to have made another voyage to the same coast in 1526, and to have been killed by the natives in 1527 or 1528, possibly while attempting to follow the track of Magellan, possibly while acting as pilot to the English ship *Mary of Guildford*.

CARDINAL WOLSEY

C. 1475 — 29 November 1530

Thomas Wolsey, a priest sprung from an obscure family at Ipswich, advanced himself to the highest offices in England. He was made successively royal almoner, privy councillor, bishop of Lincoln, archbishop of York, cardinal, lord chancellor, and papal legate, and from about 1512 to 1529 was chief minister of Henry VIII. Then, having lost the royal favour, he was deprived of the majority of his honours and emoluments, and in the following year died while under arrest for treason. His name is associated in extant documents with an attempt made in 1521 to send an English expedition to America, and with measures taken in 1522 to protect the Newfoundland fishing fleet.

The first edition of his *Portraits and Memoirs of Illustrious Personages* was begun in 1814. There have been several later editions and reprints. William Holl (1807–1871), the son of an engraver of the same name, became himself one of the prominent English engravers of the middle of the nineteenth century. Hans Holbein (1497–1543), one of the world's greatest portrait painters, was born at Augsburg, the son of an artist known as Hans Holbein the elder. His early work was done chiefly at Basle and Lucerne. In 1526 he came to England with a letter of introduction from Erasmus to Sir Thomas More. In 1528 he returned to Basle, but in 1532 was again in England, where he remained, except for occasional journeys to the continent, the rest of his life. From 1536 he was frequently in the service of Henry VIII. One of the earliest of his many paintings and drawings of court personages is that of Jane Seymour at Vienna, of which there is a contemporary replica at the Duke of Bedford's seat, Woburn Abbey, besides a preliminary drawing at Windsor. His paintings and drawings—of the latter there is an important collection at Windsor—have much historical value.

HENRY VIII

28 June 1491 — 28 January 1547

Henry VIII, son of Henry VII and Elizabeth of York, succeeded to the throne of England on April 22, 1509. During his reign several attempts were made at western exploration: apparently an unsuccessful search for a north-west passage by Thomas Pert, of the royal navy, in 1516-17; an abortive effort in 1521 to get the Livery Companies of London to send an expedition under Sebastian Cabot; a voyage in 1527 by John Rut in the ship *Mary of Guildford*; and another by a Master Hore, a lawyer of London, in 1536.

The majority of the portraits of Henry VIII attributed to Holbein are by other hands. The drawing at Munich is authentic, and that in the Barber-Surgeons' Hall was begun by him in 1542, but left unfinished at his death. Bernard Baron (c. 1700-1766) was a French engraver who spent the later part of his life in England.

This portrait is from a painting in the Louvre, dated about 1524 and attributed to Jean Clouet (c.1485-1540-1). Clouet, who was called Jehan, Jehanot, Jehannot, or Janet, was of Flenish origin, and perhaps the son of a Jean Clouet, or Cloet, an artist in the employ of the Duke of Burgundy. He was court painter to Francis I from about 1516 till his death.

Tiziano Vecelli, known as Titian (1477?-1576), was born in Cadore, Venetia, at a date usually given as 1477, but by some considered to be 1489. He became one of the world's greatest painters, and some of his best work was done in portraiture. He executed pictures for the Venetian Republic, the Emperor Charles V, Pope Paul III,

Phillip II of Spain, and many other contemporary rulers. His portrait of Francis I, now in the Louvre, was painted about 1536, but not from direct sittings, for he never saw the French King.

12 October 1537 — 6 July 1553

Edward VI, son of Henry VIII and Jane Seymour, succeeded to the throne of England January 28, 1547.

162 FIG. 67. — Edward VI. as a child. Drawing by Hans Holbein the Younger. (In the Windsor | Collection.)

Bust.

Print : about 3 x 2½. In text of *A History of All Nations*, by J. H. Wright and others. vol. XI (Philadelphia and New York : [1905]).

- 163 EDWARD VI | From the portrait in the National Portrait Gallery, painted under the influence of Holbein | *Face p. 50*

H. L. : to l.; head in profile; r. hand holding rose.

Half-tone print : 7½ x 5¾. In the collection of *Historical Portraits* chosen by Emery Walker and published by the Clarendon Press, vol. I (1909).

This painting resembles a drawing at Windsor which is attributed, probably erroneously, to Holbein.

Bust : to l.; with cap.

Photo-process print, in tint : 3¾ x 2. Two others on same plate. Pl. to Agnes Strickland, *loc. cit.*

Guillim, or William, Stretes, or Streetes, was a Dutch portrait painter of whose life little is known. He was in England at least from 1546 to 1556, and was employed at court under Edward VI and Mary. He painted several portraits of Edward, but their identity is not now certain.

Nearly W. L. : to l.; with plumed hat, ermine-trimmed surcoat, collar of rubies, and the Garter; dagger in r. hand; throne in background, and landscape seen through window to r.

Line and stipple engr. : 4¾ x 3¾. Pl. to *Portraits and Memoirs of the most illustrious personages of British History*, by Edmund Lodge, 3rd ed., no. XVII (London : 1830).

This portrait at Petworth resembles, but is not a replica of, another at Windsor. Both have been attributed, erroneously, to Holbein. Henry Thomas Ryall (1811-1867) was an English engraver of much skill. He was appointed historical engraver to the Queen.

This engraving of the seal of Edward VI is dedicated by Sandford to Sir George Jeffreys (1648–1689), afterwards lord chief justice and lord chancellor, the presiding judge of the “bloody assizes”.

POPE MARCELLUS II

6 May 1501 — 30 April 1555

Marcello Cervini degli Spannochi, a native of Montepulciano in Tuscany, was created cardinal in 1539, and elected Pope, in succession to Julius III, on April 9, 1555. The Globe of Ulpius, constructed in 1542, was dedicated to him.

Gaetano Vascellini (b. c. 1745) was an Italian engraver who etched several original portraits of distinguished Florentines.

ORONCE FINÉ

1494 — 6 October 1555

Oronce Finé, or Orontius Finaeus, a native of Briançon, was appointed by Francis I lecturer in mathematics at the royal college in Paris. We have from him a map of the world executed in 1531, and a copy of another, probably of 1536, both of which are of considerable importance in the history of American cartography.

IGNATIUS LOYOLA

24 December? 1491 — 31 July 1556

Inigo, son of Beltrán Yañez de Onez y Loyola, the founder of the Jesuit Order, was born at the castle of Loyola in Guipuscoa, Spain.

In 1534, while at the University of Paris, he and six companions associated themselves together for religious purposes; in 1540 the "Society of Jesus" was constituted by papal bull; and in 1541 the new order was organised and Ignatius elected the first general. In 1622 he was canonized.

This is from a print by Scheltius à Bolswert (1586–1659), after a painting by the great Flemish artist, Peter Paul Rubens (1577–1640).

ANNE OF CLEVES

22 September 1515 — 28 July 1557

Anne, fourth Queen of Henry VIII, was the daughter of John, Duke of Cleves. She was married to Henry January 6, 1540. On July 9 of the same year the marriage was declared by Convocation to be void.

JACQUES CARTIER

1491 ? — 1 September 1557

Jacques Cartier, a mariner and prominent citizen of St. Malo, in Brittany, made three, or four, voyages of discovery under the direction of the French court: in 1534, when he explored the Gulf of St. Law-

Etching, coloured : 6 x 3¾; with border, 6¾ x 3¾. Pl. to *Costumes Français depuis Clovis jusqu'à nos jours*, by M. de Clugny, vol. II (Paris : 1836). There is a reproduction in colours in *The Voyages of Jacques Cartier*, by H. P. Biggar (*Publications of the Public Archives of Canada*, No. 11) (Ottawa : 1924).

This print, the property of Dr. A. G. Doughty, is on loan to the Public Archives.

"L. M." would appear to be Jean Marie Raphaël Léopold Massard (b. 1812), a native of Crouy-sur-Ourcq, who drew and engraved, apparently chiefly, or entirely, from his own imagination, many of the figures in Clugny's work. See Dr. Biggar's article in *The Canadian Historical Review*, June, 1925.

- 184 Jacques Cartier. — D'après un ancien dessin à la plume conservé à la Bibliothèque impériale.

Bust : to r.

Woodcut : about 3¼ x 3¼. In text of *Voyageurs anciens et modernes*, by Édouard Charton, vol. IV (Paris : 1857).

In a footnote Charton explains that this cut is not taken directly from the pen-and-ink drawing in the Bibliothèque impériale, of which he himself could find no trace, but from the painting by Riss at St. Malo, which was based on that drawing. His knowledge of the drawing, and, probably, his belief that the Riss painting was derived from it, were due to Charles Cunat, the historian of St. Malo. François Riss (1804-c. 1866) was a painter, born in Moscow, who practised in France. His portrait of Cartier, now in the Hôtel de Ville, St. Malo, was executed, it is stated by Parkman, in 1839. Possibly the pen-and-ink portrait which served, according to Charton, as his model was the same as that which is reproduced in the *Relation originale du voyage de Jacques Cartier*, by Michelant and Ramé (Paris: 1867), as after an original in the prints department of the Bibliothèque impériale.

It is stated in the foreword to the 1867 publication that the original of this portrait was in the print department of the Bibliothèque impériale, now the Bibliothèque nationale. Several searches made since then have failed to reveal any trace of such a portrait. It is possible that it had already disappeared before 1867, if it be the drawing to which Charton refers in 1857 as that on which the Riss portrait was based.

- 197 MEDAILLON EN BOIS DE 1704 | (Trouvé au Cap-des-Rosiers, Canada, novembre 1908) | qu'on croit représenter Jacques Cartier | Propriété de John M. Clarke, Albany, N. Y.
Bust : profile; to l.
Half-tone print : $4\frac{1}{4}$ diam.; in *Revue Canadienne*, nouvelle série, vol. V (1910).

The original is a wooden medallion, twenty inches in diameter, bearing the carved image of a man's head, the features of which have some resemblance to those of the Riss painting and the Ramé print of Jacques Cartier. On the reverse are carved the letters "J C" and the figures "1704". The medallion was found in 1908, in the walled-up window of a very old house at the cove of Cap-des-Rosiers, on the Gaspé coast. It is believed to have been the stern-shield of a vessel which may have been wrecked on this coast.

SEBASTIAN CABOT

1476 ? — 1557 ?

Sebastian, son of John Cabot, was born at Bristol, or, possibly, at Venice. He may have sailed with his father in one or both of his expeditions, in 1497 and 1498. In 1512 he entered the service of Spain, and in 1518 was appointed pilot major. About 1548 he returned to England, and at the incorporation of the company of Merchant Adventurers of London, in 1551, was named governor for life. Of numerous maps executed by him only one survives, which, in a published copy of 1544, forms an important source for the history of discovery in Canada.

The original of this engraving was discovered at Slains Castle, Scotland, by Charles J. Harford, of Bristol, in 1792, and some years later was purchased by him. A portrait bearing a similar inscription was in the King's private gallery at Whitehall in the time of James I, and that at Slains was probably either the same picture or a copy. Soon after being engraved by Rawle it was purchased by Richard Biddle, of Pittsburg, Pennsylvania. There it was destroyed by fire in 1845. A copy in oils had previously been made by an artist named Chapman for the Massachusetts Historical Society, and another for the New York Historical Society. The plate by Samuel Rawle, an engraver and draughtsman who practised in London early in the nineteenth century, was originally published in Seyers's *Memoirs of Bristol* (1821-3).

CHARLES V

24 February 1500 — 21 September 1558

Charles was the son of Philip of Burgundy and of Joanna daughter of Ferdinand and Isabella of Spain. Through his father, he inherited Burgundy, the Netherlands, and the Habsburg dominions in southern Germany; through his mother—who, although she lived almost until his own retirement, was incapacitated by mental weakness from ruling—Spain and the Spanish territories in Italy and America. In 1519 he was elected emperor. In 1555-56 he resigned his dignities and retired to private life at Yuste in Spain. His reign saw the establishment of Spanish power on the mainland of America, Magellan's expedition to the east, the voyage of Stephen Gomez to the coasts of Canada in 1524-25, and some measures taken to check the French attempts at colonisation under Cartier and Roberval.

MARY QUEEN OF SCOTS

7 or 8 December 1542 — 8 February 1587

Mary Stuart, daughter of James V of Scotland, whom she succeeded some eight days after her birth, was educated in France and became the queen of Francis II. On his death she returned to Scotland, 1561. In 1568 she fled to England, where she was held prisoner until condemned and put to death on a charge of conspiracy against Queen Elizabeth. By her second husband, Lord Darnley, she was the mother of James I of England.

- 259 MARY AS DAUPHINESS (ABOUT 1558) | ASCRIBED TO CLOUET | PICTURE NOW AT STE. GENEVIÈVE

Nearly H. L.: to r.

Half-tone print : $3\frac{7}{8} \times 2\frac{5}{8}$. Three others on same plate. Pl. to *The Catholic Encyclopedia*, vol. IX (New York : [1910]).

This picture has been ascribed also to Jehan de Court, who in 1566-7 was drawing a salary as painter to the Queen of Scots, and later was in the employ of the French court.

A tradition, apparently without serious foundation, says that the Morton portrait was painted during Mary's captivity at Lochleven Castle, 1567-68. Experts differ in their opinions: some consider it to have been painted, probably from a miniature, about 1580; others assign it to the seventeenth century. The engraving published by Lodge was taken from a water-colour sketch made by W. Hilton, R. A., in 1819, in which the details of the original were quite freely altered. James Thomson (1787?-1850) was a celebrated English stipple engraver, whose work was done almost entirely in portraiture.

ANDRÉ THEVET

1502 — 23 November 1590

André Thevet sailed to South America with Villegagnon's colonising expedition in 1555. His claim to have visited Canada appears to be false. About 1558 he was appointed historiographer and cosmograph-

er to the French king. His published works include *Les Singularites de la France antartique* (Paris: 1557), *La Cosmographie universelle* (Paris: 1571, 1575), and *Les Vrais Pourtraits et vies des hommes illustres* (Paris: 1584). His descriptions of Canada are drawn partly from the reports of others, partly from his own imagination.

SIR MARTIN FROBISHER

C. 1535 — 22 November 1594

Sir Martin Frobisher, a native of Yorkshire, who became one of the most skilful seamen of the time, led three expeditions, in 1576, 1577, and 1578, in search of a North-West Passage. Frobisher Bay and Hudson's Strait were discovered. Frobisher later fought with distinction in the war against Spain, dying of a wound received in this service.

SIR JOHN HAWKINS

1532 — 12 November 1595

Sir John Hawkins, or Hawkyns, slave-trader and naval commander, was a native of Plymouth. He bore an important share in the struggles at sea between English and Spaniards during the reign of Elizabeth. In 1565 he gave valuable assistance to the French colony in Florida.

Federigo Zuccaro, or Zuccherò, (1542 or 1543-1690) was an Italian painter, a native of Urbino, who worked in France, Antwerp, Amsterdam, England and Spain, as well as Italy. He came to England in 1574, and remained four years. The attribution of this painting to him is, therefore, probably incorrect; but it is considered to be a genuine contemporary portrait. To Zuccherò has been credited a large number of portraits of Queen Elizabeth, and of notable persons of her reign, but only a few of these appear to be actually his work.

SIR FRANCIS DRAKE

C. 1545 — 28 January 1596

Sir Francis Drake, a native of Devonshire and kinsman of Sir John Hawkins, became the most famous of English seamen in the wars and privateering expeditions against the Spaniards during the reign of Elizabeth. He was the first English commander to circumnavigate the globe, the voyage lasting from December 13, 1577, to September 26, 1580. In 1579 he was on the west coast of North America, probably near the site of San Francisco, and took possession of the country for England, naming it New Albion. He died while in command of an expedition against the Spanish settlements in the West Indies.

This print is a reproduction of that published by Judocus Hondius about 1595. It was based on an engraving by Thomas de Leu from a picture by Jean Rabel (c. 1545-1603). It is doubtful whether Rabel ever saw Drake.

There is another adaptation of the Rabel portrait in a medallion on *A Mapp of Virginia . . . Domina Virginia Ferrar collegit . . . 1651*, which is reproduced in *Narrative and Critical History of America*, edited by Justin Winsor, vol. III (Boston and New York : [1884]). Foppens's *Bibliotheca Belgica*, vol. I (1739). Philipp Galle (1537-1612), a draughtsman and engraver, was a native of Haarlem who settled at Antwerp in 1570 and became the founder of a celebrated family of engravers.

PHILIP II

21 May 1527 — 13 September 1598

Philip II of Spain was the son of the Emperor Charles V and of Isabella of Portugal. Through his father, who retired from public life in

1555-1556, he inherited Spain, the Netherlands, a large part of Italy, and the Spanish overseas dominions; through his mother, Portugal and its possessions, of which he became sovereign in 1580. He thus held the combined Spanish and Portuguese claims to the whole of the Americas. In 1554 he married Mary, Queen of England. The later part of his reign saw the maritime wars against the Dutch and English which broke Spain's naval power and opened the New World to other nations.

ELIZABETH

7 September 1533 — 24 March 1603

Elizabeth, daughter of Henry VIII and Anne Boleyn, succeeded her sister Mary on the throne of England in 1558. During her reign war was waged with Spain, resulting in the break-down of Spanish maritime power and monopoly in the New World, and the first English settlements were established in Newfoundland and "Virginia".

William Rogers (c. 1540—c. 1604) was one of the earliest English engravers. He is known to have been working in London 159- to 1604. This portrait of Elizabeth seems to be based on a picture by Olivier, of which a pen drawing on vellum in the royal collection at Windsor is believed to be the original. Isaac Olivier, or Oliver, (c. 1556-1617) was a resident of London, probably of French extraction, who became famous as a miniature painter.

HENRY IV

14 December 1553 — 14 May 1610

Henry de Bourbon, King of Navarre, descendant of Louis IX, succeeded to the French throne on the death of Henry III, the last of the line of Valois, in 1589. He brought the Wars of Religion in France to an end, and did much to consolidate the power of France and of the French monarchy. During his reign the first permanent French settlements were made in Canada.

HENRY HUDSON

? — 1611?

Henry Hudson, an English navigator, made two voyages, in 1607 and 1608, in an attempt to discover a northern or north-eastern passage to China. In 1609 he examined the coast of America for the Dutch East India Company and explored New York harbour and Hudson river. In 1610 he was sent by an English company to seek the North West Passage: he sailed through Hudson Strait and Bay, and wintered probably at the south-west end of James Bay. When about to sail for home his crew mutinied and cast him adrift, June 22, 1611.

THE COMTE DE SOISSONS

3 November 1566 — 1 November 1612

Charles de Bourbon, Comte de Soissons, son of Louis I, Prince de Condé, was one of the most prominent of the French nobility in his time. In 1602 he was made governor of Dauphiné, in 1610 of Normandy, and on October 8, 1612, was appointed viceroy of New France.

HENRY, PRINCE OF WALES

19 February 1594 — 6 November 1612

Henry Frederick, eldest son of James I and Anne of Denmark, was created Prince of Wales on June 4, 1610. He was interested in western discovery, and became a friend of Sir Walter Raleigh and a patron of the Virginia colony. To him was dedicated Erondelle's translation of part of Lescarbot's *Histoire de la Nouvelle France*, published in London in 1609. It is said that he drew up the instructions for Button's expedition to Hudson Bay in 1612, and when the charter of the North West Passage Company was granted, July 26, 1612, he was named "supreme protector".

Daniel Mytens (c. 1590-c.1656), a native of The Hague, came to England about 1618 and was employed as a portrait painter at the court of James I and Charles I. He returned to Holland about 1630. If the portrait of Prince Henry is by him it is probably a copy of an older painting. William Finden (1787-1852), English line engraver, was a celebrated producer of prints and book illustrations.

CHARLES DE MONTMORENCY

C. 1537 — 1612

Charles de Montmorency, Duc de Damville, known in earlier life as the sieur de Meru, was the son of Anne de Montmorency, constable of France. On January 21, 1596, he was appointed admiral of France and Brittany. Champlain dedicated to him the account of his first voyage to Canada, the *Des Sauvages* of 1603.

This engraving was based on that by Simon van de Passe. Simon (1591-c. 1644), son of Crispin van de Pass, or Passe, was established in London by his father about 1613, but went to Denmark about ten years later.

SIR WALTER RALEIGH

C. 1552 — 29 October 1618

Sir Walter Raleigh, or Ralegh, a native of Devon, half-brother of Sir Humphrey Gilbert and cousin of Sir Richard Grenville, was a soldier and adventurer who rose to high favour at the court of Elizabeth. He had a large interest in Gilbert's expedition of 1583 to Newfoundland, and subsequently was the chief promoter of English attempts at colonisation in "Virginia". In 1603 he was condemned to death on a charge of conspiracy against James I, but the sentence was executed only after an expedition led by him in 1617 to discover a gold mine in South America had resulted in failure and a conflict with the Spaniards.

THE EARL OF SOUTHAMPTON

6 October 1573 — 10 November 1624

Henry Wriothesley, third Earl of Southampton, is best known as a patron of literature and a friend of Shakespeare. He served in the war against Spain during Elizabeth's reign, and, when hostilities were renewed in 1624, accompanied the English expedition to the Netherlands, where he died. He had helped to send out Hudson's expedition of 1610, was an incorporator of the North West Passage Company in 1612, and was a promoter and for some time treasurer of the Virginia Company.

CHARLES HOWARD, EARL OF NOTTINGHAM

1536 — 14 December 1624

Charles, Baron Howard of Effingham, Earl of Nottingham, was appointed Lord High Admiral of England in May, 1585, a post he retained until 1618. He was commander-in-chief of the forces which resisted the Armada in 1588. He was a subscriber to Frobisher's voyages, 1576-78, and to Fenton's voyage, 1582, and was a member of the North West Passage Company in 1612.

JAMES I

19 June 1566 — 27 March 1625

James, son of Henry Stuart, Lord Darnly, and Mary, Queen of Scots, succeeded as James VI of Scotland on his mother's abdication, July 24, 1567. On the death of Elizabeth, March 24, 1603, he succeeded to the crown of England as James I. His reign saw the beginning of permanent English settlements in America. Charters were granted to the Virginia Company, the Newfoundland Company, and the North West Passage Company; special grants were made of "New England," "Maine," "Nova Scotia", and "Avalon"; and the creation of the order of "Baronets of Nova Scotia" was announced.

NICHOLAS VIEL

? — June or July 1625

Of the early life of Nicholas Viel, Récollet priest, called "the first martyr of Canada," little is known. He arrived at Quebec on June 28, 1623, and after a few days left for the mission among the Huron Indians. When returning to Quebec two years later he was drowned by certain Hurons in the rapids henceforth known as the Sault-au-Récollet.

SIR THOMAS SMITH

C. 1558 — 4 September 1625

Sir Thomas Smith, or Smythe, a native of Kent, became the most notable English merchant of his time. He was prominent in all the great merchant companies, including the East India Company, the Moscovy Company, the Virginia Company, and the North West Passage Company, of which he was first governor. He assisted in sending out the North West expeditions of Hudson, Button, and Byleth and Baffin. His name was attached to Smith's Sound, between Ellesmere Land and Greenland.

FRANCIS BACON

22 January 1561 — 9 April 1626

Francis Bacon, Baron Verulam, Viscount St. Albans, philosopher, statesman and essayist, was the son of Sir Nicholas Bacon, lord keeper of the great seal under Elizabeth. He became a law officer of the crown, and in 1607 was appointed solicitor-general, in 1613 attorney-general, in 1617 lord keeper, and in 1618 lord chancellor. In 1621 he was condemned and deposed on charges of accepting bribes. He wrote an essay "Of Plantations", was a member of council of the Virginia Company, and was an incorporator of the Newfoundland Company, 1610, and of the North West Passage Company, 1612.

THE SIEUR DE MONTS

C. 1558 — c. 1629

Pierre du Guast, or du Gua, Sieur de Monts, a native of Le Gua in Vendée, was an adherent of Henry IV in the civil wars. He accompanied the expedition of Chauvin to the St. Lawrence in 1600, and seems to have made other voyages to America. In 1603 he was appointed lieutenant-general and vice-admiral of Acadia. In 1604 he led the expedition which founded the settlement at Ste. Croix, transferred by him in the following year to Port Royal. In 1608 he sent out the expedition which founded Quebec. Although taking no further active part in its affairs he remained interested in the country until his death, which took place, apparently, between 1628 and 1632.

HENRY II, DUC DE MONTMORENCY

30 April 1595 — 30 October 1632

Henry II, son of Henry I, Duc de Montmorency, and grandson of Anne de Montmorency, succeeded to the title on his father's death in 1614. In 1612 he had been appointed admiral of France in succession to his uncle, and in 1630 was created marshal. On February 25, 1620, he became viceroy of New France in succession to his brother-in-law, the Prince de Condé, and held the position until December, 1624, when he relinquished it to his nephew, the Duc de Ventadour. In 1632 he took part in a rebellion against the government and was captured and put to death.

VISCOUNT FALKLAND

1576 — September 1633

Sir Henry Cary, or Carey, was created Viscount Falkland in 1620 and appointed lord deputy of Ireland in 1622, retaining this office until 1629. He was an incorporator of the North West Passage Company in 1612, and about 1623 made an unsuccessful attempt to establish a colony in Newfoundland.

SAMUEL DE CHAMPLAIN

1567? — 25 December 1635

Samuel de Champlain, soldier, mariner and geographer, was a native of Brouage, in Saintonge, France. He devoted his life to discovery and colonisation in America, and became assistant to De Monts in the exploration and settlement of Acadia, and, later, founder of Quebec and first governor of New France.

T. Q. L.: to l.; in lace collar and long coat with slashed sleeves. View of Quebec in l. background.

Lithograph, oval : $12\frac{3}{4} \times 9\frac{3}{8}$; with border, $13\frac{3}{4} \times 10\frac{3}{8}$. There is a photogravure copy of this print in *Pioneers of France in the New World*, by Francis Parkman, vol. II (Boston : 1897), and another in *Champlain*, by N. E. Dionne (*The Makers of Canada series*), Edition de luxe (Toronto : 1905); also half-tone copies in *Les Fêtes du troisième centenaire de Québec* (Quebec : 1911); *The Canadian Historical Review*, Dec., 1920; and elsewhere.

Louis César Joseph Ducornet (1806–1856), a native of Lille, was deformed from birth, having neither arms nor thighs, and only four toes to his right foot. Nevertheless he became an artist of considerable ability, using the brush with toes and mouth. The lithographed portrait of Champlain prepared from his design is assigned by cataloguers to the year 1854. It is, so far as is known, the earliest portrait of Champlain, unless some of the figures in the illustrations to Champlain's own works might be so regarded. In *The Canadian Historical Review*, vol. I, no. 4 (December, 1920), H. P. Biggar has shown that this picture by Ducornet was, almost certainly, based on the portrait of Michel Porticelli, contrôleur-général des finances, engraved by Balthazar Moncornet in 1654. A print of the Porticelli portrait is given, *loc. cit.*,

Similar portrait, with modifications. Bust : to r.

Stipple engr.: about 4 x 4½. Pl. to *History and General Description of New France*, by Charlevoix, translated by John Gilmary Shea, vol. II (New York : 1866). The same plate is in *Voyages of Samuel de Champlain*, translated by Charles Pomery Otis and edited by the Rev. Edmund F. Slafter, vol. I (Boston : The Prince Society, 1880), and in *First Establishment of the Faith in New France*, by LeClerq, translated by John Gilmary Shea, vol. I (New York : 1881). In each of these the title has the following addition: "Copyright by John G. Shea, 1878." There is a photogravure copy in *Canada and Its Provinces*, edited by Adam Shortt and Arthur G. Doughty, vol. I (Toronto : 1913), and many other reproductions have been published.

Shea is the first to mention a portrait of Champlain by Moncornet. Slafter, *op. cit.*, adds that the copy which Hamel used was "obtained in France by the late M. Faribault," that is, G. B. Faribault, Hamel's father-in-law, well known as an early investigator in Canadian history. Although searches were made by Slafter and Otis, and repeatedly since then by others, no portrait of Champlain by Moncornet, nor any record of such a portrait, has ever been found. Doubtless the Moncornet portrait of Porticelli has been the ultimate source, not only of Ducornet's portrait of Champlain, but also of all the subsequent affirmations of the existence of a Moncornet Champlain.

434 THE HAMEL CHAMPLAIN.

Same portrait. H. L. Cape Diamond in r. background. Shows whole picture, including frame.

Half-tone print : 5½ x 4½. Pl. to *Acadiensis*, vol. IV, nos. 3-4 (July-Oct. 1904). This plate is also in *The River St. John*, by the Rev. Wm. O. Raymond (St. John: 1910).

This print is from the portrait now in the parliament buildings at Ottawa, which bears the date 1870. It must be a replica of that from which Shea's plate of 1866 was made.

The Ducornet portrait, reversed; view of Quebec in r. background, not reversed, but modified.

Line print : oval, 4½ x 3½; with border, 5 x 4. Pl. to *Œuvres de Champlain*, edited by the Abbé C. H. Laverdière, vol. I (Quebec : 1870). A copy of this print, on which the attribution to Moncornet either is missing or has been erased, is reproduced in half-tone in *La Tragédie d'un peuple*, by Émile Lauvrière, vol. I (Paris : 1922), as being from "Bibl. Nat.; Cabinet des Estampes."

436 *E. RONJAT* | CHAMPLAIN (SAMUEL DE) | d'après un portrait gravé par Moncornet

Same portrait, modified. Nearly H. L.: to l. Background omitted. Details of the features are nearer to the Laverdière than to the Ducornet print.

Heliotype from woodcut : about 4 x 3½. Pl. to Otis & Slafter, *op. cit.* There are also in the collection several other reproductions of this portrait.

Étienne-Antoine-Joseph-Eugène Ronjat (1822-1912), a native of Vienne (Isère), was a painter and engraver whose work was chiefly in book illustration. The original woodcut from Ronjat's design of Champlain's portrait was published in the 1876 editions, French and English, of Guizot's *Histoire de France*. According to Victor Hugo Paltsits, who has made a careful study of the portraits of Champlain (in *Acadiensis*, vol. IV, nos. 3-4, July-October, 1904), Ronjat in 1904 declared specifically that his picture was after an engraving by Moncornet and not after the lithograph by Ducornet, and that the Moncornet engraving was in the Bibliothèque Nationale, Paris. From the fact that no such engraving is known in the Bibliothèque Nationale, and from the appearance of the picture itself, it may be considered probable that Ronjat's exemplar was the Laverdière portrait, which bore an ascription to Moncornet. It is less probable that he used a copy of Moncornet's Particelli.

CAPTAIN THOMAS JAMES

C. 1593 — 1635?

Captain Thomas James, a native of Bristol, sailed from that port in 1631 in search of the North West Passage; wintered in the bay that bears his name; returned to Bristol in 1632; and in 1633 published an account of the voyage. He retired from the naval service on account of serious illness in 1635, but the date of his death is not known.

SIR WILLIAM ALEXANDER, EARL OF STIRLING

C. 1567 — 12 September 1640

William Alexander, of Menstrie, near Stirling, Scotland, poet and statesman, was a favourite of James I and Charles I. He was knighted in 1609, and in 1630 created Viscount Stirling, in 1633 Earl of Stirling and Viscount Canada, and in 1639 Earl of Dovan. In 1626 he was appointed secretary of state for Scotland. In 1621 he received a grant of "Nova Scotia", from the St. Croix river to the St. Lawrence. To promote his colonisation projects the order of Baronets of Nova Scotia was created. In 1629 he founded a Scottish settlement at Port Royal, but in 1632, as a result of peace with France, the settlers were removed. He was also associated with the Kirkes in sending out the expedition which captured Quebec in 1629.

CARDINAL RICHELIEU

9 September 1585 — 4 December 1642

Armand Jean du Plessis de Richelieu, most famous of French statesmen of the seventeenth century, was a native of Paris. He became bishop of Luçon in 1607, cardinal in 1622, chief minister of Louis XIII in 1624, and Duc de Richelieu in 1631. From 1624 until his death he was practically ruler of France. As superintendent-general of navigation and commerce he controlled the French colonial policy. In 1627 he founded the Company of New France, of which he was the most prominent member.

HENRI DE BOURBON, PRINCE DE CONDÉ

1 September 1588 — 11 December 1646

Henri II de Bourbon, Prince de Condé, first prince of the blood and premier peer of France, was, at the suggestion of Champlain, appointed viceroy of New France, in succession to his uncle, the Comte de Soissons, on November 22, 1612. He held the office until February 10, 1620, with the exception of a period from 1616 to 1619, when Condé was a political prisoner and the vicerealty was entrusted to the Marquis de Thémines.

C. 1610 — July 1648

Pierre, son of René Le Gardeur, member of an old Norman family, and of Catherine de Corday, arrived at Quebec June 11, 1636. From 1642 to 1647 he was commander of the Canadian fleet of the Company of New France. In 1644 he went to France as a delegate from the inhabitants of Canada to the government. On April 16, 1647, he received grants of the seigniories of La Chesnaye, or Lachenaie (afterwards divided into Lachenaie and Repentigny, or L'Assomption) and Bécancour. He died while on a voyage from France to Canada.

CHARLES I

19 November 1600 — 30 January 1649

Charles I, second son of James I and Anne of Denmark, became heir-apparent to the British throne on the death of his brother, Prince Henry, in 1612, and succeeded his father on March 27, 1625. As a result of the civil war between king and parliament, and the troubles following thereon, he was found guilty of treason by a special "high court of justice", and beheaded. His reign saw extensive English settlements in New England; the attempt at a Scottish settlement in Nova Scotia; and the capture and restoration of the French establishments at Port Royal and Quebec.

Reproduction of line engr.: 8½ x 7; with border, 9¾ (including title, 11½) x 7¾. In *Reproductions of Prints in the British Museum, New Series, Part IX* (1900).

This engraving seems to be from the same painting as that which follows. Sir Robert Peake (c. 1592–1667) was the son of Robert Peake, a painter to James I, and became an engraver and a print-seller "on Snow Hill near Holborn Conduit". On the outbreak of the civil war he joined the royalists, served with distinction, and was knighted in 1645. He was taken prisoner the same year, and banished under the Protector. William Faithorne (1616–1691) was a pupil of Peake, under whom he worked for three or four years before he accompanied him into the royalist army. Taken prisoner with Peake, he was exiled to France, where he studied under Robert Nanteuil. About 1650 he returned to England: his plates thereafter are of the highest excellence that English line engraving had yet attained. He also worked in crayons and oils.

Half-tone print : $5\frac{1}{2} \times 6\frac{1}{2}$. In the collection of *Historical Portraits* chosen by Emery Walker and published by the Clarendon Press, vol. II (1911).

This triple portrait was painted by Van Dyck, probably about 1637, to be sent to the Roman sculptor, Giovanni Lorenzo Bernini (1598-1680), that he might make a bust of the king. It seems to be later than Champaigne's similar portrait of Richelieu, from which, in that case, Van Dyck, doubtless, obtained the idea. It remained at Rome until about 1796, when it came to England, and in 1822 was purchased by George IV. The bust by Bernini was destroyed in a fire at Whitehall Palace in 1691.

GABRIEL LALEMANT

10 October 1610 — 17 March 1649

Gabriel Lalemant, a native of Paris, nephew of the Jesuit fathers Charles and Jerome Lalemant, entered the Jesuit Order on March 24, 1630; arrived in Canada, September 20, 1646; and in August, 1648, went to the Huron missions. He was captured by the Iroquois at the village of St. Louis on March 16, 1649, taken to St. Ignace, and there tortured to death.

JOHN WINTHROP

12 January 1588 — 26 March 1649

John Winthrop, a native of Suffolk, was elected governor of the colony of Massachusetts Bay in 1629, when it was decided to transfer the government from England to America. He arrived in Massachusetts in 1630, and was re-elected governor until 1634, and at intervals thereafter until his death. He was governor in 1643, when help was given by Massachusetts to Charles de La Tour, and in 1646, when a peace was made with La Tour's rival, D'Aunay Charnisay.

**PHILIP HERBERT, EARL OF PEMBROKE
AND MONTGOMERY**

10 October 1584 — 23 January 1650

Philip Herbert, second son of the second Earl of Pembroke, was created Earl of Montgomery in 1605 and succeeded his elder brother William as Earl of Pembroke in 1630. He was an incorporator of the North West Passage Company in 1612 and one of the grantees of Newfoundland in 1637. He joined the parliament in the civil war, and was appointed a commissioner for plantations.

JOHN DIGBY, EARL OF BRISTOL

February 1580 — January 1653

John Digby, diplomat and statesman, was knighted in 1606 and created Baron Digby of Sherborne in 1618, and Earl of Bristol in 1622. Under James I he served as English ambassador at the Spanish and other courts. During the civil war he supported the king, and at its conclusion retired to France, where he died. He was a member of the North West Passage Company in 1612.

The original is attributed, doubtfully, to R. Elstracke.

POPE INNOCENT X

6 May 1574 — 7 January 1655

Giambattista Pamfili, a native of Rome, was created cardinal in 1626 and elected Pope in 1644, succeeding Urban VIII. It is said that he gave personally to the Jesuit missionary Francisco Guiseppe Bressani, whose hands had been mutilated by the Iroquois, authorisation to continue saying mass.

JEAN JACQUES OLIER

20 September 1608 — 2 April 1657

Jean Jacques Olier, a native of Paris, was ordained priest in 1633 and became a leader in the revival of religion in France. In 1640 he and Jérôme Le Royer de La Dauversière founded the Society of Notre-Dame de Montréal, which acquired the Island of Montreal and in 1641 sent out an expedition to establish there a missionary settlement. In 1641 Olier and some associates took charge of the parish of St. Sulpice in Paris, where he organised the Society and founded the Seminary of St. Sulpice. He continued to take an interest in Montreal, and in 1657 sent thither four of his Sulpician priests.

OLIVER CROMWELL

25 April 1599 — 3 September 1658

Oliver Cromwell, a native of Huntingdon, who, as a result of the civil war, became the most powerful personage in England, was installed as Protector on December 16, 1653. In 1654 an English naval expedition, assisted by forces from Massachusetts, seized Acadia, and in 1656 Cromwell made a grant thereof to Charles La Tour, Thomas Temple and William Crowne.

Robert Walker (?- 1658 or 1660), a native of London, was an imitator and perhaps a pupil of Van Dyck. He came into prominence under the Commonwealth, when he

painted portraits of several republican leaders. He painted Cromwell several times. Of this portrait there are two copies, both ascribed to Walker, one at Althorp, the seat of the Earl Spencer, and the other in the National Portrait Gallery, London. It has been said that the page in the picture is Cromwell's son Richard.

JEAN DE BERNIÈRES-LOUVIGNY

1602 — 17 May 1659

Jean de Bernières-Louvigny was the third son of Pierre de Bernières, Baron de Louvigny et d'Acqueville. He succeeded his father and his brother as treasurer of France in the district of Caen. In 1646-49 he built at Caen a "Hermitage", where, although a layman, he gave spiritual direction to a group of associates, among whom were for a time the future Bishop Laval and his own nephew, Henri de Bernières, afterwards first *curé* of Quebec. He was also a counsellor of Madame de La Peltrie and of Marie de L'Incarnation.

JÉRÔME LE ROYER DE LA DAUVERSIÈRE

2 May 1597 — 6 November 1659

Jérôme Le Royer, Sieur de La Dauversière, was a native of La Flèche in Anjou, where he became receiver of taxes. He was the first to conceive the design of establishing a religious colony at Montreal in Canada, and in 1640 he, with Jean Jacques Olier and others, organised the Society of Notre Dame de Montréal, by which that design was put into effect. In 1639 he had founded at La Flèche the community of "Filles Hospitalières de St. Joseph", three of whom were sent to Montreal in 1659 to take charge of the Hôtel-Dieu.

The artist was probably Léopold Massard, who has been mentioned in connection with the earliest printed representation of Jacques Cartier.

ADAM DOLLARD DES ORMEAUX

1634 or 1635 — 21 May 1660

Adam Dollard, Sieur des Ormeaux, came to Montreal probably in 1658. In the spring of 1660 he led a party of sixteen up the Ottawa river to check an impending attack of the Iroquois. He and his men were killed at a spot usually identified as the foot of the Long Sault rapids, but the Iroquois suffered such losses that they abandoned their design of attacking the French settlements.

This monument, designed by Laliberté, stands in the Parc Lafontaine, Montreal. It was unveiled on June 24, 1920.

CARDINAL MAZARIN

14 July 1602 — 9 March 1661

Jules Mazarin, son of Pietro Mazarini, of an old Sicilian family, was born either at Rome or at Piscina in the Abruzzi. He had attained high distinction in the papal service before he, in 1639, transferred his allegiance to France. In 1641 he was made cardinal, and on Richelieu's death he succeeded to the position of first minister, which he retained, with the exception of two short periods of exile in 1651-3, until his death.

Gerrit, or Gerard, van Honthorst (1590-1656), born at Utrecht, studied art in his native country and in Italy. He returned to Utrecht in 1622, and in the school which he opened is said to have had the Queen of Bohemia and her children as pupils. In 1628 he came to England, and remained for some time, decorating the palace of Whitehall and painting portraits.

SIR HARRY VANE

May 1613 — 14 June 1662

Sir Henry, commonly known as Sir Harry, Vane was the son of Sir Henry Vane the elder, secretary of state and afterwards a supporter of the parliament. Sir Harry Vane resided in Massachusetts from 1635 to 1637, and was governor for one year. He became one of the leaders of parliament in the civil war, was a commissioner of plantations in 1643, and in 1652 was a member of the committee appointed to enquire into the conduct of Sir David Kirke in Newfoundland. After the restoration of Charles II he was put to death.

GEORGE MONCK, DUKE OF ALBEMARLE

6 December 1608 — 3 January 1670

George Monck, or Monk, a native of Potheridge, near Torrington, in Devonshire, was a soldier of distinction who, having held the position of commander-in-chief in Scotland under Cromwell, became the chief agent in the restoration of Charles II. He was created Duke of Albemarle on July 7, 1660, and under Charles was captain-general of the land forces and one of the commanders of the fleet. He assisted in sending out the expedition for Hudson's Bay under the guidance of Chouart des Groselliers and Radisson, in 1668, and was one of the original members of the Hudson's Bay Company. His interests passed to his son, Christopher, second Duke of Albemarle, who is named in the charter of incorporation.

MARIE DE L'INCARNATION

28 October 1599 — 30 April 1672

Marie Guyard was the daughter of a silk merchant, or manufacturer, of Tours, and in 1617 became the wife of Claude Martin, also a silk manufacturer of the same city. He died in 1619, and in 1632 she entered the Ursuline Convent, being professed in 1633 as Marie de L'Incarnation. She was in charge of the first Ursulines sent to Quebec, in 1639, and remained superior of the convent there until her death. She was beatified in 1877.

Jan Edelinck (c. 1643-1680), brother of Gerard, was born at Antwerp, but came to Paris in 1665, and became engraver to the king. The Mariette family was famous in the literary and art world of Paris. Pierre (1) Mariette (?-1657) was a picture dealer, whose son Pierre (2) Mariette (1634-1716) was, doubtless, the publisher of this print. Among the children of Pierre (2) were Pierre Joseph (?-1729), engraver and print seller; Marie Madeleine, who married the painter and engraver Jean Baptiste Corneille; Jean (1660-1742), who became a pupil of Corneille and an engraver of merit, as well as one of the leading book and print dealers of Paris; and Denis (1666-1741), also a book dealer. Jean's son, Pierre Jean (1694-1774), continued the business of engraver, dealer and publisher, but is more famous as a writer on art and as a collector of prints and drawings. His collection, which was sold in 1775, was one of the most important ever made by private individuals.

MOLIÈRE

January 1622 — 17 February 1673

Jean Baptiste Poquelin, who adopted the stage-name of Molière, was the greatest of French dramatists. In 1694 the governor Frontenac proposed to have Molière's comedy *Tartufe* presented in Quebec, but bishop Saint-Vallier offered such opposition that the proposal was abandoned.

Sébastien Bourdon (1616-1671), famous French painter and engraver, was born at Montpellier. He received part of his early training in Italy, and in later life spent a short time at the court of Queen Christina of Sweden. His more important works were historical scenes and *tableaux de genre*, but he also painted a number of portraits. Jacques Firmin Beauvarlet (1731-1797), a native of Abbeville, went to Paris when very young and there became celebrated as an engraver. The portrait of Molière is one of his most notable plates.

THE DUCHESSE D'AIGUILLON

1604 — 17 April 1675

Marie Madeleine de Wignerod, or Vignerot, was the daughter of René de Wignerod, Marquis du Pont de Courlai, and of Françoise

Duplessis, sister of Cardinal Richelieu. In 1620 she married Antoine de Beauvin de Roure, Marquis de Combalet, who was killed in 1622 at the siege of Montpellier. She became lady of the bed-chamber to Marie de' Medici, and in 1638 Richelieu purchased for her the estate of Aiguillon, and had her created duchess. She devoted her energies and her wealth to charity, especially in Canada, where, besides assisting other enterprises, she founded and endowed the Hôtel-Dieu at Quebec.

JACQUES MARQUETTE

1 June 1637 — 18 May 1675

Jacques Marquette was born at Laon. On October 8, 1654, he entered the Society of Jesus at Nancy. In 1666 he came to Canada, and in 1668 was sent to the mission of the Ottawas, on the upper great lakes. In 1671 he founded the mission of St. Ignace, at Mackinac, and in 1673, in company with Louis Joliet, he discovered the Mississippi river. He died on the eastern shore of Lake Michigan while returning to Mackinac from the Illinois mission.

643 PHOTOGRAVURE & COLOR CO. N. Y. | ALLEGED PORTRAIT OF JACQUES MARQUETTE, S. J.

Same portrait.

Photogravure : $4\frac{1}{4} \times 3\frac{1}{2}$. One other on same plate. Pl. to *Facsimile of Pere Marquette's Illinois Prayer Book*, with introduction by Col. J. L. Hubert Neilson, M.D. (Quebec : 1908). There are many other reproductions of this portrait : in the *Ontario Historical Society Papers and Records*, vol. III (Toronto : 1901) and vol. IV (1902); *Father Marquette*, by Reuben Gold Thwaites (New York : 1903); *Father Marquette*, by Rev. Samuel Hedges (New York : 1903); *New England and New France* by James Douglas (Toronto and New York : 1913); and elsewhere. A representation of the back of the panel on which the portrait is painted is given in *Ontario Historical Society Papers and Records*, vol. III.

According to information given by Donald Guthrie McNab, the wooden panel on which this portrait was painted was found by him among some rubbish on a cart in Little St. James Street, Montreal, in September, 1896. It was said to be from an old house then being demolished. In 1899 McNab cleaned the panel and discovered, under the varnish and dirt, the portrait. On the face of the panel, and along its upper edge, in indistinct red letters, was the legend "Marquette De l C.. frerie d.. Is" and to the right "R Roos 1669." On the back of the panel, in deeply carved letters, apparently of later date, was the name "Pere Marquette"; under this in faint lettering "L. Chretien Mission", next several imperfect characters, and on a third line a long word beginning with "O..n" and ending with "ais." See R. G. Thwaites, *The Jesuit Relations*, vol. LXXI, pp. 400-3; David Boyle, *Ontario Historical Society Papers and Records*, vol. III, p. 167. The painting was sold to a private collector and its present location is not known. Apparently it was never examined by a competent art critic: its authenticity cannot be regarded as certain. If painted in 1669, it must have been from memory or from an earlier sketch. No contemporary artist of the name "R. Roos" is known. All other portraits of Marquette are imaginary.

THE VICOMTE DE TURENNE

11 September 1611 — 27 July 1675

Henri de La Tour d'Auvergne, Vicomte de Turenne, marshal of France, was the son of Henri, Duc de Bouillon and sovereign prince of Sedan, and of Elizabeth of Nassau, daughter of William of Orange. He became one of the foremost military leaders of Europe. He had no direct association with Canadian history, but Tracy and the Sulpician Dollier de Casson had served under him, and it was he who first gave marked recognition to the ability of Frontenac by selecting him, in 1669, for the defense of Candia against the Turks.

JOHN LEVERETT

1616 — 16 March 1679

John Leverett was a native of Boston, England, who came to Massa-
 chusetts in 1633. Returning to England, he served through the
 civil war and acquired the confidence of Cromwell. In 1654 he organ-
 ised the forces which, under the command of Robert Sedgwick,
 captured the French forts in Acadia, and he was governor of Acadia,
 or Nova Scotia, from 1654 to 1656. From 1673 to 1678 he was
 governor of Massachusetts. He was knighted in 1676.

NICOLAS FOUQUET

1615 — 23 March 1680

Nicolas Fouquet, or Foucquet, afterwards Vicomte de Melum and de Vaux and Marquis de Belle-Isle, was a lawyer of Paris who attached himself to Mazarin and became in 1650 *procureur-général* to the *parlement* of Paris, and in 1653 superintendent of finances. He directed the maritime and colonial policy of France, and, through an intermediary, controlled the post of viceroy of America. He was arrested by Louis XIV in 1661, and, after a long trial, was imprisoned at Pignerol from 1665 until his death.

PRINCE RUPERT

17 December 1619 — 29 November 1682

Rupert, Count Palatine of the Rhine and Duke of Bavaria, Duke of Cumberland and Earl of Holderness, was the third son of the Elector Palatine, Frederick V, and of Elizabeth, daughter of James I of England. In the civil war he became the most famous of the military leaders on the royalist side, and in the reign of Charles II a naval commander of distinction. In 1670 he was appointed a member of the council for trade and plantations, and from 1673 to 1679 was first lord of the admiralty. In 1667 he became the patron of the Canadian trader, Chouart des Groseilliers, and in 1668 helped to fit out the expedition which this man led to Hudson's Bay. On May 2, 1670, Charles II issued to him, as first governor, and to his associates the

CHARLES LE MOYNE

C 1 August 1626 — c. 1 February 1685

Charles Le Moyne, founder of one of the most famous of Canadian families, was a native of Dieppe, the son of Pierre Le Moyne and of Judith Duchesne. He was baptised August 2, 1626. In 1641 he came to Quebec and in 1646 settled at Montreal. He distinguished himself greatly in the service of the colony, especially in the war with the Iroquois. In 1657 he obtained the first of several concessions which formed the seigniory of Longueuil, and in 1673 a concession which

became the seigniory of Chateauguay. A *lettre de noblesse* creating him Sieur de Longueuil was issued in 1668. He died between January 30 and February 6, 1685.

CHARLES II

29 May 1630 — 6 February 1685

Charles II, eldest son of Charles I and Queen Henrietta Maria, was proclaimed king in Scotland on the death of his father in 1649. The Scottish forces were crushed by Cromwell in 1651, and Charles fled to France. He was restored to the British throne in 1660, landing at Dover on May 26. His reign saw the restoration of Nova Scotia to France by the peace of Breda, 1667, and the founding of the Hudson's Bay Company.

LA SALLE

November 1643 — 19 March 1687

Robert René Cavelier, Sieur de La Salle, one of the greatest of American explorers, was a native of Rouen, where he was baptized on November 22, 1643. In 1666 he came to Canada, and in 1667 obtained a grant of land which became the seigniorship of Lachine. In 1669 he began those western expeditions which added the valley of the Mississippi river to the dominions of France. In 1675 he received a grant of Fort Frontenac. In 1684 he led an expedition from France to found a colony at the mouth of the Mississippi. The undertaking proved a failure, and La Salle was murdered by some of his followers.

Of this portrait Margry says only that he was compelled to select, from two engravings representing the discoverer, that which appeared most likely to be authentic. According to Justin Winsor (*Narrative and Critical History of America*, vol. IV, p. 242) it was derived from a representation of the murder of La Salle, engraved by Van der Gucht and published in the London (1698) edition of Hennepin's *New Discovery*.

THE MARQUIS DE LOUVOIS

January 1639 — 16 July 1691

François Michel Le Tellier, Marquis de Louvois, son of Michel Le Tellier, chancellor of France, was baptized in Paris January 18, 1639. In 1654 he obtained the reversion of the office of secretary of state for war, and exercised the duties from about 1666. He and his rival, Colbert, were the ablest ministers of Louis XIV, and he made the French army the most efficient in the world.

JEAN TALON

C. 1625 — 23 November 1694

Jean Talon, son of Philippe Talon—who was the second cousin of Omer Talon, *avocat-général* of the *parlement* of Paris—was born at Chalons-sur-Marne. He entered the army administration service about 1653, and was intendant of Hainaut from 1655 to 1665. On March 23, 1665, he was appointed intendant of New France; arrived at Quebec September 12; and departed for France in November, 1668. He received a second appointment May 10, 1669; reached Quebec, August 18, 1670; and returned November, 1672. He was captain-governor of the castle of Mariemont, near Mons, from 1670 till his death; first valet of the king's wardrobe from about 1673 to 1692; and secretary of the king's cabinet, about 1681 to 1692. In 1667-1670 he purchased the fief des Islets, originally granted to Louis Hébert; in 1671 he was created Baron des Islets; and in 1675 the title was raised to that of Comte d'Orsainville.

SIR WILLIAM PHIPPS

2 February 1651 — 18 February 1695

William Phipps, or Phips, was born near Pemaquid (now Bristol) in the present state of Maine. He became a merchant captain, and acquired fame and fortune by discovering a wrecked Spanish treasure-ship. In 1687 he was knighted and appointed provost marshal-general of New England. In 1690 he captured Port Royal, but was defeated in an expedition against Quebec. In 1691 he was appointed governor of Massachusetts.

The original painting was the property of Thomas Thompson, and, later, of the Hon. Francis B. Hayes of Boston. Mr. C. K. Bolton, of the Boston Athenæum, who has made a careful study of this picture, declares that "it does not and cannot represent Sir William Phips, nor do we know whom it does represent."

SIMON BRADSTREET

March 1603 — 27 March 1697.

Simon Bradstreet, a native of Harbling, Lincolnshire, England, came to Massachusetts in 1630. He was the first secretary of the colony, was deputy-governor from 1672 to 1679, and governor from 1679 to 1686. After the successful revolt against Governor Andros in 1689 he was president of the colony till 1692. He was head of the administration that fitted out the expeditions against Port Royal and Quebec in 1690.

THE COMTE DE FRONTENAC

1620 — 28 November 1698

Louis de Buade, Comte de Frontenac et de Palluau, was the son of Henri de Buade, friend of Louis XIII, and of Anne de Phélippeaux, member of a family of note in the official world of France. He distinguished himself as a soldier, especially in the command of Candia during its last siege by the Turks, 1669. On April 6, 1672, he was appointed governor of New France, and in September arrived at Quebec; on May 9, 1682, he was recalled, and left Quebec in September. He was re-appointed governor June 7, 1689, and reached Quebec on October 15. The remainder of his life was spent in New France.

Bust : to l.; in profile; head resting on pillow. After death.

Woodcut : about 4 x 4½. Pl. to *Histoire des Canadiens-Français*, by Benjamin Sulte, vol. I (Montreal : 1882). There are other reproductions of this portrait.

This picture is based on photographs of an engraving, believed to be a portrait of Frontenac, which were sold in Quebec from about 1867. In reality, the original engraving was a portrait of Jean Henri Heidegger (1633—1698), a Swiss clergyman, engraved in 1778 by Jean Henri Lips (1758—1817), and published in a work of Gaspard Lavater. See *1690 Sir William Phips devant Québec*, by Ernest Myrand (Quebec: 1893), pp. 384—402.

There is not, so far as is known, any authentic portrait of Frontenac.

FRÈRE DIDACE

28 June 1657 — 21 February 1699

Claude Pelletier was born at Ste. Anne de Beaupré. He entered the Récollet order at Quebec in 1679, taking the name Didace, and was stationed subsequently at Ile Percée, Placentia in Newfoundland, Montreal and Trois Rivières. After his death depositions as to his sanctity were taken by direction of Bishop St. Vallier, with a view to possible canonization.

Jean Baptiste Santerre (1658—1717), a French painter—born at Magny, near Pontoise, died at Paris—was an artist who has left comparatively few works, but these very carefully executed.

MARGUERITE BOURGEOIS

17 April 1620 — 12 January 1700

Marguerite Bourgeois, foundress of the Congregation of Notre Dame de Montréal, was born at Troyes. In 1653 she came to Montreal. In 1657 she opened her first school. For carrying on the work of teaching she organized, in 1659, an uncloistered community of sisters, the constitution of which was finally adopted in 1698. She herself retired from the superiorship in 1693. In 1878 she was declared venerable, and in 1910 her virtues were proclaimed heroic, by the papal court.

LOUIS JOLLIET

September 1645 — 1700

Louis Jolliet, explorer and cartographer, was born at Quebec: his baptism took place September 21, 1645. He was educated at the Jesuit College. He became a fur trader; accompanied Father Marquette to the Mississippi river in 1673; made a journey to Hudson Bay in 1679; and in 1694 explored the coast of Labrador. In 1679 he received a grant, jointly with his brother-in-law, of the seigniory of the Mingan islands; in 1680 a grant of that of Anticosti; and in 1697 of that of the Rivière des Etchemins. In 1680 he was appointed "hydrographer of the king", and in 1697 "professor of hydrography for the king at Quebec". He died at some date between May 4 and September 15, 1700.
